"Grammatitital" ?

On topic: Good to see that you didn't completely destroy anything. Care to tell us more about how you did it?

Looks like crap...

Use this:

Code <!DOCTYPE html PUBLIC "-//W3C//DTD XHTML 1.0 Transitional//EN"

"http://www.w3.org/TR/xhtml1/DTD/xhtml1-transitional.dtd">

<html xmlns="http://www.w3.org/1999/xhtml">

<head>

<meta http-equiv="Content-Type" content="text/html; charset=utf-8" />

<title>Untitled Document</title>

</head>

Maybe if you took out the pause, start, and stop buttons.

Cody1992 - August 29, 2014, 7:13 am

They have recovered. All done. Lol.

x107 - August 29, 2014, 10:50 am

LOL :p but i can hack it again if i want to....

stfu motherfvcker!You're making a big deal out of it, like you were some sort of an angel forgiving them by "only defacing them".

I agree with Sonder, why would you deface a random site that nobody knows of? Everyone on the planet can use havij and click their way to the admin-panel.

Grow up and if ur gonna be a skid, atleast use sqlmap.

this is Web hosting, with verified SSL certificate, it's WHMC script how the fvck you say that i used Havij? omg

I hate to rain on your parade and all, as I feel quite bad for you right now since the WFH section is all coming down on you but verified SSL or not, doesn't make a difference. The web hosting part alright I'll give you that, but using a WHMC script is just as feasible as using havij, Bc like using havij you probably have no prior knowledge of what's still going on behind the scenes.
