Thread: [Code Manager](#)

PapaBeans - August 28, 2014, 8:52 pm

Hello HF!

Today I will be releasing a program I like to call, Code Manager. What it does it help you, well, manage and keep track of snippets of codes, notes, etc that you want. Please leave feedback, and post another program you would like to have.

Thank you, and enjoy!

[Virus total](#)

[Code Manager Download](#)

I would be more than willing to share with 1 or 2 trusted users if you all really don't trust me, just HMU.

Questions

(Aug 29, 2014 02:17 PM)+Haze Wrote: [\[CITE\]](#) Just wondering, where are the info saved held on? On the users pc? If so how.

Its saved in a folder (which I included in the download) called "codes". The files are saved just as normal "File" file type (so no extension). The codes folder must be in the same directory as the exe.

SIM-1676753 - August 28, 2014, 9:05 pm

I believe Github's Gist would suffice for me. I like the concept though, so good job.

?Eatos - August 29, 2014, 5:55 am

Looks good. I made something similar in the past. It really helps a lot when it comes to snippets etc...

PapaBeans - August 29, 2014, 8:05 am

Thanks guys, love the feedback! Anything that you guys would like to see made?

SaketSaket - August 29, 2014, 12:41 pm

Nice work mate... Look nice...

@?Eatos - awesome work... look professional... ;)

Source Coder - August 29, 2014, 12:57 pm

Dude This is pretty im new to coding could add me skype jag_mc

PapaBeans - August 29, 2014, 2:16 pm

for others to find in the massive list

Protótype_ - September 6, 2014, 10:37 am

Nice work, In the past ive only seen this concept as an idea and not been out into reality. gj

youlded - has1 - September 6, 2014, 11:30 am

This looks really cool man! great job on this!

MrTurtle77 - September 6, 2014, 11:33 am

Personally, I have a folder full of code snippets, but this could be very useful for others. Great job! ?

youlded - has1 - September 6, 2014, 11:37 am

Well, with his tool you could easily edit/view those snippets! So i really like his tool

Btw, one suggestion: Add categories Maybe? Because if you have 20 snippets, 5 for vb.net, 5 for c# and 10 for php then its kinda hard to seperate them without categories...

That's true, I hope others find this tool useful.

System[X] - September 6, 2014, 4:21 pm

Here is the one i made a couple years ago and took around an hour to code.

<https://hackforums.net/showthread.php?tid=2957069>

Saves the info to the registry system so if the tool gets deleted, re downloaded you don't lose nothing.

It's nothing fancy or anything.

[img]http://net-auth.net/upload/CodeSafemain.jpg[/img]

And here is another one i have made recently, This one actually encrypts all the info and also has a password lock on it.

[img]http://net-auth.net/upload/65y7h6r75647he5.jpg[/img]

Thanks

Thanks

That is pretty cool! I have a webserver with all of my notes, but I didn't think people would trust that so I made it local :P

System[X] - September 7, 2014, 2:03 am

How local ? a .txt file ?

Best to use registry system then the user can not accidentally delete it. if you want i can show you examples of how to add to the registry, read, edit and delete.

Thanks

PapaBeans - September 7, 2014, 2:14 am

Thanks

Stores it in a "file" file. But yes I'd love that

Ok here you go, ive tried to explain a few things clearly.

To Create the Key\Sub Key

Code `My.Computer.Registry.CurrentUser.CreateSubKey("NameOfTool\Whatever")` Basically the key should be the name of your app/tool, the sub key is the name of like a folder.

To add an item

Code `My.Computer.Registry.SetValue("HKEY_CURRENT_USER\NameOfTool\Whatever", "name", "value")` The name is the name of what you are saving. For example if it was your home address the name would be "Home Address" and the value would be the "address"

To List them

Code `Dim ListIt() As String = My.Computer.Registry.CurrentUser.OpenSubKey("NameOfTool\Whatever").GetValueNames`

`For Each list As String In ListIt`
`ListBox1.Items.Add(list)`
`Next` Adds all the items in the Key\Sub key by "name"

To delete an item

Code `Dim regKey As Microsoft.Win32.RegistryKey = My.Computer.Registry.CurrentUser.OpenSubKey("NameOfTool\Whatever", True)`
`regKey.DeleteValue("name")` Deletes the item by "name"

To check to see if its worked just run Regedit tool(start menu then either run or search "regedit")

Hope it helps.

Thanks

can you give me a download link please?

CyberAlien - September 11, 2014, 5:48 am

Nice work man, i'll download it as soon as i get on my PC ?

Bcoder - September 11, 2014, 7:26 am

looks wonderfull, Great job keep it moving

PapaBeans - September 11, 2014, 1:41 pm

Glad to hear it!

(Sep 11, 2014 07:26 AM)Bcoder Wrote: [\[CITE\]](#) looks wonderfull, Great job keep it moving Will do! Possibly releasing a Client Server template (Advanced with threading)

HFTetramorph - September 11, 2014, 3:56 pm

Its a really simple program but it has a good and extremely helpful use.

Thanks for the release!

MAXUSdev - September 12, 2014, 8:33 am

Omg this is so handy for other reasons too thanks man

Zeivu~ - October 6, 2014, 5:15 pm

I really like Code Manager I know its for codes
but I use it for my passwords :P

Hawk HF - October 7, 2014, 8:19 am

(Oct 6, 2014 05:15 PM)LetsGetTheir Wrote: [\[CITE\]](#) I really like Code Manager I know its for codes

That's probably not a good idea.

I haven't used CodeManager yet, but there's a good chance that the code (or passwords in your case) are stored as plain text, seeing as there's no real need to encode/decode source codes on a private computer.

Michael J. Scofield - October 7, 2014, 10:43 pm

the download link doesnt work anymore :(

SIM-1456245 - October 8, 2014, 8:23 am

It's nothing fancy or anything.

And here is another one i have made recently, This one actually encrypts all the info and also has a password lock on it

Thanks

Kiddin'? The registry not for kind data. You aren't supposed to flood it with those kind of data chunks.

Lets be honest, any program from HF thats for security or protection is 90% very doubtfull. I rather make it myself ^^

+Haze - October 8, 2014, 8:48 am

Visual Studio already has a code snippet manager inbuilt.

Spoiler ([Click to View](#))

Zeivu~ - October 8, 2014, 11:12 am

Nothing can ever be Private
Security is a illusion

zeroexp - October 8, 2014, 11:29 am

Damn right it does, and I'm taking him up on it.

Zeivu~ - October 9, 2014, 6:36 am

Bro papabeans send me the source
Code please since I gave you something :p

CyberTechnologyInc - October 10, 2014, 1:29 pm

Security is an illusion*
Security is just there to slow people down, there will never be a real way to keep out anyone but the original owner of an account.
