Thread: [can't update drivers](#)

d3Ad - August 29, 2014, 2:38 am

Hello,

I recently bought a lenovo G510 notebook/free DOS and installed windows 7 professional 32bit the problem is that I cannot update some drivers (check image link below) everytime I try to update, a message "No driver found" appears

I have installed every important update

I would greatly appreciate any help.

Try to do a manual install of the drivers [Drivers](#)

d3Ad - August 29, 2014, 3:01 am

thank you. safe to install all of them?

what is chipset driver?

when I installed windows I just installed the wireless driver, nothing else

First time I bought a free dos and I need a little help please

jekyle give you the best way to download and install drivers (from manufacturer website) .

no don't download all of them. download just drivers support windows vista 32 bit (they will work for windows 7)
