Thread: [Changing an EXE file with .NET Reflector](#)

CECIJ® - August 29, 2014, 11:32 am

Is it possible to do this?

I have this bruteforcing program, but it doesn't work because the login link has changed. I want to change the login link in the program but I can't get into the source files and change it without having a million errors.

Someone hallp

SoulZeh - August 29, 2014, 11:52 am

Posting in the right section is a starter, just saying.

He may be able to help, you never know but posting in the wrong section never helps.

DisguiserNET - August 29, 2014, 12:40 pm

posting in the ddred section is a beginning

not hard tho, i can take a look

Send me the file via PM and explain me what you want to be changed on it.

Nobody will be able to get a clean and editable project from a such assembly.

I want the browser to be directed to

<https://support.snapchat.com/login2?next=/>

instead of

<https://support.snapchat.com/login>

I hope you can figure this out!
