Thread: [\[Help\] HTPasswd only for dir.](#)

?Java - September 2, 2014, 9:48 pm

I need to make a htpasswd but only for the directory and not for any of the files in the dir. The files have no extensions, but they're viewable.

Is this possible?

Files "*" makes then doing satisfy any also makes the directory unpassword protected.
Please help.

Xorex - September 3, 2014, 4:27 pm

So you do not want people to access the directory and not see the files?

```
Code # ALLOW USER BY IP
<Limit GET POST>
  order deny,allow
  deny from all
  allow from IP you choose
</Limit>
```

ErrorDocument 403 <http://www.google.com>

```
Code # ALLOW USER BY IP
<Limit GET POST>
  order deny,allow
  deny from all
  allow from IP you choose
</Limit>
```

ErrorDocument 403 <http://www.google.com>

Problem is it's using cloudflare, so I need to do that but with a password instead.
