And what are those basic knowledge we should have ?

If you have a VPS, I will install everything for you. Everything = panel, tor, stealer...

You can forget that knowledges if you just know what is TOR and you already used it.

It's a stealer. You will get a .exe file which when is opened, will send the stolen passwords (only saved one on browsers atm) to your .onion http panel through TOR.

Green Death - September 3, 2014, 4:12 pm

The form grabber will get this bot to an other lvl.

With that it will really become powerfull.

Alan Turing - September 3, 2014, 4:31 pm

I've managed to decrease the binary size from ~4MB to ~1.5MB.

I'm still working on it.

Why would you specifically need a Debian distrobution? Why wouldn't this work on any other distrobution?

Alan Turing - September 30, 2014, 1:43 pm

(Sep 30, 2014 11:23 AM)Zayne Wrote: [\[CITE\]](#) Why would you specifically need a Debian distrobution? Why wouldn't this work on any other distrobution?

Because I have some automated scripts to install Onion Stealer on debian(-based) distribs. But if you are a linux expert, it should not be a problem, you can use any other distribution.

I fixed a bug on Onion Stealer, all previous customers can contact me to have a free rebuild.
