Thread: [Visual Studio \[Visual Basic\]: File-X Program Release Soon](#)

SlyStudios - September 6, 2014, 9:24 pm

Hello Everyone,

Today, I just wanted to announce the release of my new Program (File-X)
Which will be coming soon [FREE] for all users on HackForums in the near Future.

The programs allows you to:

- Open/Access any file on your computer straight from the program.
- Import any file you find on your computer into the Program, and access it the next time you open for extremely quick access to any file.
- Create Data/Folder Groups within the program which can hold any data you import for complete organization within the program.
- Search any file you have imported, then just hit enter to open it instantly.
- Set keywords to easily search a program you need you have imported
- Customize your program exactly how you like it (Which will always be updating) just access the settings tab, and instantly have access to all aspects of the program, changing them exactly to your desired mind.

Also, as I can see questions concerning the program, it is a File Database/Manager, you can create Folders, Groups, Reminders, etc. (More Coming Soon) for your own personal File Database Environment. This program develops it's own cyberspace world directed by your commands, It can organize your files into a group you set, and once you open the program, they will again be there. You can just search the File you want, and open it :) As said, it is a File Database/Manager, you direct the program using the set options you have, to generate your own custom management of your items, with proven easy access, I hope you all enjoy how it sounds, and are anxious for the release, if you find that this program be nothing to you, please don't just reply with hate, leave your criticism on what should be done instead. Thank You.

If the Image happens to not appear, please go to: [File-X Preview](#)

Once this program is released, I hope a multitude of you guys find it useful, it's coded in Visual Basic, and is very reliable, thanks again to all! Reply, even PM with your thoughts so I know you guys will want it, even leave suggestions for Ideas, and I'll put you in the supporters page! Thank you all!
