Thread: [How To Get Unlimited HitLeap Credits \[Step by Step TUT\]](#)

Salman Khan - September 7, 2014, 11:50 pm

REQUIREMENTS

— Ust the Latest Firefox Available

<http://www.mozilla.org/en-US/firefox/new>

—Firefox Add-ons

1. Profile Switcher – To run multiple firefox

<https://addons.mozilla.org/en-US/firefox/addon/profileswitcher/>

2. Hola – To acquire different IP per profile

<https://hola.org/>

3. Modify Header – To get the 70% surfing rate even without the use of their viewer

<https://addons.mozilla.org/hu/firefox/addon/modify-headers/>

4. AdBlock Plus – To block ads/banners/flash that might make your broser crash

<https://adblockplus.org/en/firefox>

5. Imacros – To run the viewer continuosly

<https://addons.mozilla.org/en-US/firefox/addon/imacros-for-firefox/>

6. Block Site – To block sites that causes redirections/javascript pop ups

<https://addons.mozilla.org/en-US/firefox/addon/blocksite/>

—Optional Add-ons

1. Image Block – To block images

<https://addons.mozilla.org/en-US/firefox/addon/image-block/>

2. Flashblock – To block flash

<http://flashblock.mozdev.org/>

3.

I also recommend you use

<https://addons.mozilla.org/en-US/firefox/addon/minimizetotray-revived/>

This add-on, Some of you have noticed that Firefox keeps Maximizing its windows every time Imacros is complete with One Cycle! and it is annoying!

This solves the problem!

Firefox set-up

1. Install Firefox.

2. After installation, install the add-ons, starting from 1-6 (profile switcher first, last block site). Restart Firefox when required/prompted.

3. Set your Firefox as follows

First of all we have extensions or add-ons to make Firefox faster, but, this way you can stop banners, videos, from playing ever again on Hitleap (ex. Youtube, Auto play ads)

First open up your Firefox

Second go to your add-ons tab or Extension.

After that you'll need to Download Adblock (To stop banners) Download Adblock Here

How to Install add-ons in Firefox

And you are good to go! Just login your Hitleap and traffic exchange

4. Go to HitLeap – The Quality Traffic Exchange and set up an IP from hola by clicking the Hola icon and choosing from the drop-down menu.

5. Activate Add-on bar on Firefox.

6. Follow these steps

7. Go to HitLeap – The Quality Traffic Exchange <http://hitleap.com/> and set up an IP from hola by clicking the Hola icon and choosing from the drop-down menu.

Sorry If Repost or Someone Already Know This.

Regards

Farhan

daam***** this is one heck of a tutorial man

nice work you put in

can you please do me a favor and show me how many creds you earn from this

Salman Khan - September 8, 2014, 1:55 am

Look at here brother

ItsFluffy - September 8, 2014, 2:22 am

a lot of views

it's been quite awhile since ive used HL, how many creds are you averaging and what are you using for? jw

Website_Hitincreaser - September 8, 2014, 2:31 am

Your using mobile hitleap ?? The webbased hitleap no longer lets you "surf" via the webbrowser you need to download there app

risk91 - September 8, 2014, 3:43 am

it is working now??

or have been not working??
