Thread: [PHP coder to fix my paypal IPN script 5\\$](#)

NoSuchAgency - September 13, 2014, 1:01 pm

I need someone to fix my paypal IPN file so it creates a voucher, and then adds it to your account. Please contact me for details.

5\$, via paypal

The code to add it is not flawed, lik I can put it in a test.php file and the script will work, but when I put it in the ipn script it won't work.

Code <?php

```
require_once 'includes/db.php';
```

```
require_once 'includes/init.php';
```

```
require_once 'includes/cCoupon.php';
```

```
// Send an empty HTTP 200 OK response to acknowledge receipt of the notification
header('HTTP/1.1 200 OK');
```

```
// Assign payment notification values to local variables
```

```
$item_name    = $_POST['item_name'];
```

```
$item_number  = $_POST['item_number'];
```

```
$payment_status = $_POST['payment_status'];
```

```
$payment_amount = $_POST['mc_gross'];
```

```
$payment_currency = $_POST['mc_currency'];
```

```
$txn_id      = $_POST['txn_id'];
```

```
$receiver_email = $_POST['receiver_email'];
```

```
$payer_email   = $_POST['payer_email'];
```

```
// Build the required acknowledgement message out of the notification just received
```

```
$req = 'cmd=_notify-validate';    // Add 'cmd=_notify-validate' to beginning of the
acknowledgement
```

```
foreach ($_POST as $key => $value) {    // Loop through the notification NV pairs
```

```
    $value = urlencode(stripslashes($value)); // Encode these values
```

```
    $req .= "&$key=$value";    // Add the NV pairs to the acknowledgement
```

```
}
```

```
// Set up the acknowledgement request headers
```

```
$header = "POST /cgi-bin/webscr HTTP/1.1\r\n";    // HTTP POST request
```

```
$header .= "Content-Type: application/x-www-form-urlencoded\r\n";
```

```
$header .= "Content-Length: " . strlen($req) . "\r\n\r\n";
```

```
// Open a socket for the acknowledgement request
```

```
$fp = fsockopen('ssl://www.paypal.com', 443, $errno, $errstr, 30);
```

```
// Send the HTTP POST request back to PayPal for validation
```

```
fputs($fp, $header . $req);
```

```
while (!feof($fp)) {    // While not EOF
```

```
    $res = fgets($fp, 1024);    // Get the acknowledgement response
```

```

if (!strcmp ($reply, "VERIFIED"))
{
if($payment_status == "Completed"){

    $code = $_POST['item_name'];
    $amount = $_POST['quantity'];
    $uid = $_POST['custom'];

    if(strlen($code) > 30 || strlen($code) == 0 || empty($code))
    {
        $errors[] = "Code must be between 1-30 chars";
    }
    if(!ctype_alnum($code))
    {
        $errors[] = "Code must only contain a-z 0-9";
    }
    if(!is_numeric($amount) && $amount > 1)
    {
        $errors[] = "Amount must be a valid integer above 1";
    }
    if (empty($errors))
    {
        $cCoupon = new CouponClass($odb);
        if($cCoupon->addCoupon($code, $amount))
        {

        }

    }else{

    }
    }
    else
    {
        foreach($errors as $error)
        {

        }

    }

    require_once('includes/cCoupon.php');
    $errors = array();

    if(!ctype_alnum($code))
    {
        array_push($errors,"Voucher can only contain 0-9 A-Z");
    }

    if (empty($errors))
    {
        $cCoupon = new CouponClass($odb);
        if($cCoupon->useCoupon($code, $uid))
        {
            $getCoupon = $odb->prepare("select `Amount` from `coupons` where `Code` =
:Code and `UserID` = :UID");

```

```

        $getCoupon->execute(array(
            ":Code" => $code,
            ":UID" => $uid,
        ));

        $amount = intval($getCoupon->fetchColumn(0));

        $addCredits = $oddb->prepare("insert into `creditpayments` (paid, type, payer, credits,
UserID, tid, date) values('0', 'Coupon', 'Coupon', :Credits, :UserID, 0, unix_timestamp())");
        $addCredits->execute(array(
            ":Credits" => $amount,
            ":UserID" => $uid,
        ));

    }else{

    }
    }
    else
    {

        foreach($errors as $error)
        {
            echo ' '.$error.'
```

</form>

Spoiler [\(Click to View\)](#)

Fixed it myself. Closing thread. thank you
