Thread: [Skype Resolvers](#)

BathingApe - September 14, 2014, 1:22 am

How can I be protected by one? This is getting ridiculous, I keep on getting resolved, and I don't know how to get protected by it. Can someone help me? Is there even a way?

420 Blaze It - September 14, 2014, 1:24 am

It shouldn't work anymore, there are methods out there to protect yourself.

Here is a perfect thread for it. <https://hackforums.net/showthread.php?tid=3726185>

Make a new skype and re add everyone if you can't fix it.
Or even better, don't use skype.

There are more advanced resolvers out now just simply buy blacklisting or get on a vpn.

SIM-2124254 - September 14, 2014, 11:46 am

Have you tried changing your skype settings to this?

Munch - September 16, 2014, 12:27 am

You could do what the user said above me or use Skype on a vpn or via mobile data.

danoon - September 16, 2014, 10:54 am

I found a way that MAY BE blocking resolvers.

```
Code netsh advfirewall firewall add rule name="Skype Anti Resolver TCP" dir=in action=block
protocol=TCP localport=32535
netsh advfirewall firewall add rule name="Skype Anti Resolver UDP" dir=in action=block
protocol=UDP localport=32535
netsh advfirewall firewall add rule name="Skype Anti Resolver TCP" dir=in action=block
protocol=TCP localport=40031
netsh advfirewall firewall add rule name="Skype Anti Resolver UDP" dir=in action=block
protocol=UDP localport=40031
netsh advfirewall firewall add rule name="Skype Anti Resolver TCP" dir=out action=block
protocol=TCP localport=32535
netsh advfirewall firewall add rule name="Skype Anti Resolver UDP" dir=out action=block
protocol=UDP localport=32535
netsh advfirewall firewall add rule name="Skype Anti Resolver TCP" dir=out action=block
protocol=TCP localport=40031
netsh advfirewall firewall add rule name="Skype Anti Resolver UDP" dir=out action=block
protocol=UDP localport=40031
Open notepad, copy this code and paste it.
Then save it as a random name but save it as a .bat file.
Open it as administrator, it works fine for me, like no resolvers work.
```

TazzyOpz - September 17, 2014, 12:04 pm

I haven't used skype in months... However back when I used it there was still the Vulnerability to where people could get your I.P Address.. To stop that from happening I used to use [censored] VPN... And it worked perfectly for me.
