Thread: [Simple Combo Switcher](#)

Mr. Carter - September 14, 2014, 7:48 am

Well I checked few other sources yesterday, which used hella long source to switch the combos.

So I checked it myself, since I had a simpler style to do it. So well all you would need is 2 listboxes, 3 textboxes, progressbar and button.

```
so do the sub and insert,  
Code For Each combos In ListBox1.Items  
Dim combo() As String = TextBox3.Text.Split(":")  
TextBox1.Text = combo(0)  
TextBox2.Text = combo(1)  
ListBox2.Items.Add(TextBox2.Text & ":" & TextBox1.Text)  
ProgressBar1.Value += 1  
Next
```

This will split the combo, add pass/email to textbox1 and the other half to textbox2.

now double click the first listbox add,
Code TextBox3.Text = ListBox1.SelectedItem This will add the selected combo to textbox3.

```
You can double click the button make it have,  
Code ProgressBar1.Maximum = ListBox1.Items.Count  
ProgressBar1.Value = 0  
Switch()  
Also to exit the sub you can do it this way,  
Code If ProgressBar1.Value = ProgressBar1.Maximum Then  
MsgBox("Done")  
Exit Sub  
End If
```

Basically here we have a combo switcher which can switch pass:user to user:pass . This is the very simple way to do this, tho there are more ways which I checked and the code was 5x longer.

If im missing something could you be kind enough to say :D

Cornflower Blue ???-? — September 14, 2014, 8:05 am

That has to be the worse source ever, you are not even using 'combos' if your for loop.

You didn't even name your controls

You are using 'MsgBox'.

Why are you storing the values in a textbox and not a string?

0/10 even Haze could do better.

0/10 even Haze could do better. But OP has a progressbar. 10 points for that.

10/10

10/10

Ohh he does? That changes everything! I didn't even notice.

Good job OP!

Luke. Wut did I tell you?

But I agree with you though lol ?

Also, why didn't you allow the user to save to .txt? Isn't that the whole point?

I just wrote the base how it works, since I saw shitloads of bigger codes without this easy coding :D

Could you please show me links to these "shitloads of bigger codes".

I'd like to see :)

Yeah sec ill update link below in abit,

Here's the 1 I found,

https://mega.co.nz/#!E99W3Z7a!DpggHK9OJ4ms2xnGNXLlgmSic6rq2mZtfDB15xs6_2M

Virusscan incase y need it,

Was lazy to add the loop, I wrote this while I made this tut :D textbox was easier also

Sn0wX - September 14, 2014, 9:43 am

wtf? a textbox was easier? Learn to program before making retard threads.

Only3 - September 14, 2014, 9:52 am

ur code is real mass first u split textbox3 to textbox 1 and 2 then u add them to listbox2 when u can add textbox3

why u loop listbox1 items if u dont use it

Mr. Carter - September 14, 2014, 9:53 am

Imao, so your calling me a retard for telling you guys a simplier method to switch combos ? smell faggotry

not really, that was my point in the start to see the process what it does, since I used timer in the first time.

The file you posted won't download for me, but what you posted makes me want to smash my head on my desk.

How could you ever even come up with using a timer for something like this ?

Sn0wX - September 14, 2014, 9:56 am

I read that code you just sent me. The reason why his code is longer is because he adds an importing and exporting feature. And he actually switches properly.

Only3 - September 14, 2014, 10:06 am

try it

```
ListBox1.Items.AddRange({"1:2", "3:4"})
ListBox2.Items.AddRange(ListBox1.Items)
```

and for the split

```
For Each s In ListBox1.Items.Cast(Of String).Select(Function(l) l.Split(":"))
    ' Do what u want with them
    'TextBox1.Text = s(0)
    'TextBox2.Text = s(1)
Next
```
