Thread: [Worm Source???](#)

HappinessIsKey - September 14, 2014, 4:50 pm

After about an hour of look my inspiration is starting to run dry does anyone know where I could find a vb.net worm source? like one that spreads other than usb? thank you!!

GenericSkid - September 14, 2014, 8:08 pm

What do you classify as a worm? Are you looking specifically for spreading methods?

0xDEAD10CC - September 14, 2014, 8:32 pm

I know you can find at least a couple in fantasy-land for VB.NET.

Narvikz - September 14, 2014, 9:36 pm

Well you can set everything as occulted and make shortcuts to the real folders running your virus swell or PE Infect all files in there.

HappinessIsKey - September 14, 2014, 10:01 pm

I gave up on finding the source and decided to just make it myself :/

Didn't you give up on that first, though?

What happened to "I don't want to copy paste"? I guess you found out you'd actually have to learn things and make an effort then.

Start with the basics. Learn more about the language, move on to malware related projects & when you understand it fully, maybe move onto a Worm project. Don't just dive into it...
