You can, but it won't even look close to as good as in C4D.

I don't know what you're doing that would make it pixelated.

I misworded myself I meant like photoshop makes it look flat still 3d but less of how it was when it was by its self.

You should just search around for C4D and use that.

CS6 extended has a 3D feature on it. but once your PC or laptop didn't meet the requirement especially if you don't have graphics card, you can see this feature.
