Thread: [I have a crypter source and](#)

CodeBinary - September 17, 2014, 2:56 pm

I cannot open it how do I open most of the files are vbp or vpw and bas

How would I open these?

I tried visual basic 2010 visual studio 2010 c# and c++ none would open.

nathan72389 - September 17, 2014, 2:58 pm

you need to have Qbasic.
google it.

Nervo - September 17, 2014, 3:15 pm

Yeah as nathan said, qbasic should work.

Spoiler ([Click to View](#))

You want to "code" a crypter and yet you don't know how to open a source? Please leave.

Aura 2.0 - September 17, 2014, 3:16 pm

If qbasic doesn't work, try rbasic, it's a newer version but still in beta.

Cornflower Blue ???-?— - September 17, 2014, 3:29 pm

If nothing above works try uskidbasic.
Works for me most of the time.

Where did he say he wants to "code" a crypter? Why don't you leave.

Also, what the fuck is the point of your post? "Yeah the person above me is right, I'm not going to add anything of value except insult you."

See the thread title. And there's as much point in his post as OP trying to open the project file, we all toy around with idiots.
