Thread: [smtp doesn't work for any keylogger for me?](#)

Mutiny - September 18, 2014, 4:16 am

Okay so I've tried Neptune and a handful of other keyloggers that are free here and they all say either " Invalid email and password " or error 530: not logged in

I've tried to fix both of them by port forwarding and nothing helps. I then check that the information is correct and it is and I stay logged in too. If anyone can help I'll be grateful :)

This is the error I receive:

It IS the correct password and email, I've tried two different emails (gmail and outlook (hotmail)) and doesnt work. I've also tried this computer and my laptop, and also my friends wifi when I went over his house and it doesnt work.
