Thread: [What tools / programs are used to hack websites to obtain passwords?](#)

timglick01 - September 19, 2014, 10:46 am

No other details than what is in thread subject

SopCast - September 19, 2014, 10:50 am

You should really elaborate, theres is several tools for finding sql injection, which can give you access to the db of shitty made sites.

timglick01 - September 19, 2014, 11:12 am

What specific tools are you recommending?

SopCast - September 19, 2014, 11:12 am

Well for sql injection for beginners, I can recommend havij (Its shit, but a nice starting tool) and any form of sql injection hunter.

A lot !

This post is way too large in subject to have a really good answer... you need to give way more informations !

First you want the login credentials for a website...

Member Section password ?

Admin panel password?

database password?

hosting panel password?

ssh password?

ftp password?

mail server password?

And so on...

Once you know that, you still have a long road to go !

If you tell us that everything we need to know is in your subject title, damn,

Learn how website works, i assume you won't be able to learn the basic

html css php

So could you at least try to learn the difference between passwords...

My 2 cents...

When i see user with 1337 status making those kind of post, it makes me think twice before buying it, taking the time to think if the information in the vip are really worth it..

SIM-1073426 - September 20, 2014, 3:00 am

PHP Code

```
<?php
include("dependencies/brain.php");
include("dependencies/skid_removal.php");
if($Non_Random_Site == $UrlToHack) {
    $Vulns = ScanForVulnerabilities();
    foreach($Vulns as $vuln) {
        if($vuln == "sqli") {
            $GetType = InjectionType($vuln);
            $Inject = UseBrainToInjectSite($UrlToHack, $GetType);
        }
    }
} else {
    echo "What are you doing? lol";
}
?>
```

Made a code for it.

133720 - September 20, 2014, 11:00 am

SQL Map and Your brain can get the password of the website.
Try it bro. I hope you will be good luck.

Niely - September 20, 2014, 3:05 pm

SQLmap is an often used tool to make the SQLi attack more easy, but you still need to find it yourself etc (it isn't an automation tool).

Maybe take a look at the web-hacking tools Kali Linux have, it are a ton. :)

Wireless Network - September 21, 2014, 1:31 am

You just need brain and computer or phone xD

D4T4B4S3 - September 21, 2014, 2:25 am

Do not use tools, try manually doing it, thats the fun and challenging part of hacking.
If you say 'no' then i'd suggest the 2 most used tools.

1-SQLMap

2-Havij

Please keep in mind manually doing it wins and thats the challenging and fun part.

?

DutchGoon™ - September 21, 2014, 2:26 am

You can hack easy an cracky website with Havij.

Canada - September 21, 2014, 10:14 am

I wouldn't be responding to this users question, he PM'd me and other members randomly asking us the same thing and tbh I think he is a fed.

Made a code for it.

I keep trying to put it in my visual basic but it's just not working! I'll try running it through VLC media to decrypt the binary code errors.

topLevel - September 23, 2014, 8:48 pm

Go download Kali linux and just google search every pre installed program. ?

SIM-1073426 - September 24, 2014, 12:17 am

Ah, common mistake. In dependencies/brain.php there's a self morphing code that changes based on if you the capacity to lift heavy weights or not. If you don't then it changes itself to faulty binary code. My suggestion would be going to the gym and redownload.

Lights Outt - September 24, 2014, 11:15 am

The most important and most power tool you will need is you're BRAIN. ?

DontMakeHackerWild - September 24, 2014, 11:45 am

i personaly use a very advanced program called Havij its extreamly userfriendly and it can really get very very deep/andvanced for those who are really into SQLI and BSQIs i really recomend it, you can try the fre version if you like but i would recommend you todo/buy/get the PRO version bicine it holds more fuures and are even more advanced then the not pro version
