Not sure if this is what you're looking for but check out these things:

Go to C:\Users\YOURUSERNAME\AppData\Roaming\Microsoft\Windows\Start Menu\Programs\Startup

Press Windowskey+R and type Regedit and press Enter. Go to

Quote: HKEY_LOCAL_MACHINE\Software\Microsoft\Windows\CurrentVersion\Run
HKEY_CURRENT_USER\Software\Microsoft\Windows\CurrentVersion\Run
HKEY_LOCAL_MACHINE\Software\Microsoft\Windows\CurrentVersion\RunOnce
HKEY_CURRENT_USER\Software\Microsoft\Windows\CurrentVersion\RunOnce

Press Windowskey+R and type msconfig and press Enter. Go to the startup tab.

You may find suspicious stuff.

Do not change anything in the registry unless you know what you're doing.

Send me a private message when you get back online. I can send you a program that will kill the bot on your central processing unit.

Use [Autoruns](#) utility to disable programs that are configured to run during system bootup or login.
