Thread: [Android Root, Force any app to run as root?](#)

xMoD - September 21, 2014, 1:41 pm

In the process of writing a script for SL4A (python), and I need root access.

I wasn't sure how I would do this, and I was already having trouble using python in the first place!

Now I have it working but I need root.

Note: I can't run python from shell, with just python.

I have to use QPython or something, as it doesn't work without.

Root your android phone? What model do you have??????

Centuries - September 21, 2014, 2:22 pm

Yes Yoit root.

Op - you must make the app be granted by a super user account or program such as SuperSU

Also the fact it won't read python except in another app is because a phone is a computer, reads only 0's and 1's you will need a way in your code for the phone to convert the python so the phone can read it.

xMoD - September 21, 2014, 9:27 pm

I have my tablet rooted sillys...

And I have supersu.

What I was asking was how can I give root to an app that DOESN'T ask for it.

Like an app on windows, if it doesn't ask u can just right click > run as admin :P

MORE IMPORTANT

Instead how can I run su from a shell script ON ANDROID.

I tried putting su at top of script, but it said permission denied.

And even if I'm already running as root.

If u don't understand it's okay, just don't reply I have other options

yayimamember - September 21, 2014, 9:57 pm

Maybe you can move it to system/app folder

xMoD - September 22, 2014, 5:13 am

Alright, I'll see.

Also, I have a better idea.

Shell script to output nmap's output to file.

Python to parse and get ips.

But still having some issues with writing and such with the scripts... I'll try a few things.

Also, what about any directories where I would have read/write perms to??

I have partially solved this.

I just run nmap from an .sh script.

Which was hard enough, but I found where I can sort of write to afile.

So i directed output to file.

Then I use python to read from that file. (As I can read without root and such so its fine atm)

Then get all ips from it and continue with the leet haxing.

:D
