Thread: [\[TUT\]How to hack a site\[TUT\]](#)

ComputerManiac00 - September 24, 2014, 12:19 pm

Hello HF!

Here is very simple tutorial, how you can hack a website in few steps.

1. Learn how to code websites. You CAN'T hack a site without knowledge how it is done. First and easy step should be HTML with CSS. Its easy language and you will be able to write your own simple site.

You can try this site: <http://www.codecademy.com>

Then you can move on Javascript. A little bit harder then HTML but not so hard. Again you can use .

After that, go on PHP and SQL. There you will see how the databases works and how to write your own. Learn it properly.

Use for ex. :

[SQL](#)
[PHP](#)

2. OK, now you know how the website look like, where the data is stored etc. Now you can start reading SQLI tutorials or PHP Security guides.

Remember:

If you know this:

from `information_schema.tables` where `table_schema=database()`

But you have no idea why the tables display on screen, you arent a hacker.

If you copied XSS alert from some thread, typed it to the KFC searchbar because SPIDER has find that vulnerability, and your name display, you arent a hacker.

Ask a lot, learn a lot, try a lot.

Sites what I gave as an example for learning, DOESNT cover everything.

Good luck,
CM00

well, this is quite something, now isnt it?

? **Soufian** ? - September 25, 2014, 2:42 pm

This is the most bullshit thread i've ever seen.

Zabuza? - September 25, 2014, 9:38 pm

Thanks I guess, but so much of this is incorrect.

AntiHacker - September 25, 2014, 9:43 pm

cool story bro ;; cool story bro ;; cool story bro ;;

Wetty Fap - September 25, 2014, 9:45 pm

So where's the tutorial. All i read was a bunch of shit telling me to go to a website to learn how websites work.

-Acid - September 26, 2014, 7:37 am

Tutorial ????

??

This post gave me cancer.

?????!!?! - October 15, 2014, 9:27 am

Worth grave-digging ??

His post gave me Ebola ?
