Thread: [Help: Root & Internet Google Nexus 7! Help](#)

thebes7 - September 25, 2014, 2:39 am

Hello guys,

I just bought a Google Nexus 7 first generation and I want to connect my InternetUSB Stick.

From what I seen online, I just have to root my tablet, buy an OTG cable and then just download PPP Widget. I tried to root my tablet using Nexus Root kit and it didn't worked.

Now I have two questions:

- 1) How to root my Google Nexus 7 tablet with Android 4.4.4 KitKat?
- 2) If I root it can I plug in a USB Internet using an OTG Cable?

From many searches I found out that Android 4.4.4 KitKat will not work anymore if I root it... I don't know. I have doubts. Others say even if I root it, it will not accept to plug in an InternetUSB to have internet all the time.

Can anyone please help me?
Thanks!

Wich "InternetUSBstick" do you have?

If its an alfa network card it needs power,

The nexus does not provide enough power to use the wifi adapter,
Install ELEMENTALX V2.2 binky bears kernel
