Thread: [Text Into Image ViceVersa](#)

Onin42 - September 29, 2014, 4:05 am

Original Thread: <https://hackforums.net/showthread.php?pid=42586327>

These topics always seem interesting, touching bytes and pixels..
What you can do with all that information.

I've done something similar (not at all.), because i saw in a movie something spy like (it's pretty stupid), it was replacing bytes to an image (by text in byte), in function of which bytes the program was converting the image could get pretty "glitched.". Something i thought interesting at the time. But still pretty stupid to be used as a spy --' (movies.)

As asked:

PasteBin: <http://pastebin.com/1EAr0FML>

For a file just encrypt it to string then put the string in it.
Pretty simple! If you don't want to "spoil" the image just add the bytes of what you want at the end of the byte image. (didn't try.)
Have fun.

? basically

```
IO.File.AppendAllText("Image.jpg", "#Split#String")  
MsgBox(IO.File.ReadAllText("Image.jpg").Split("#Split#")(1))
```

```
IO.File.AppendAllText("Image.jpg", "#Split#String")  
MsgBox(IO.File.ReadAllText("Image.jpg").Split("#Split#")(1))  
Couldn't be simpler, could it ? ?
```

Something like this should work.
