Thread: [Simple SMS Bomber](#)

White Noise - October 1, 2014, 3:12 am

Hey guys, This is just a release of a little sms bomber I made. It uses SMTP though google. Nothing special, Just thought I would upload. Still needs some touch ups but works pretty well.

Download - <https://www.dropbox.com/s/2hsxdeiz236ibwj/SMS%20Bomber.exe?dl=0>

Source - <https://www.dropbox.com/s/2mns4wglbrmvxy/SMS%20Bomber1.rar?dl=0>

Virus scan -

<https://www.virustotal.com/en/file/99ba8e8e4fd638db96b808c0fd4c5d2954a9b99298b1c872583f0714d4f081c1/analysis/1412158090/>

Not sure how it is 1/50 but if you want the source just ask and Ill upload.

Skylar™ - October 1, 2014, 3:31 am

I actually would find the source to be a lot more helpful than the actual exe.

Zeivu~ - October 1, 2014, 3:36 am

Thanks man this is really nice but like Aquatine said having the source would be much better because then instead of just using your program we would understand how it actually works and maybe add more to the bomber if you could give the Source Code that would be nice but nice release :)

White Noise - October 1, 2014, 3:38 am

I'll upload when I get to school. Currently on the bus.

420 Blaze It - October 1, 2014, 3:42 am

Interesting, the source would be more useful though, but it's easy to code.

White Noise - October 1, 2014, 4:59 am

Added the source guys. If you have any suggestions please let me know.

Ikr, i find the source alot more helpful too.

TheBarret - October 1, 2014, 5:20 am

Im looking at the source and... oh my oh my.... dude do you actually know what your doing?

sigh...lets begin...

Altho im sure you would think you find it helpfull to see the error, im pretty sure none of your product users

is even remotely intrested to be slapped in the face with message box with some error, coz they

can't do shit about it

```
Code Catch error_t As Exception
```

```
    MsgBox(error_t.ToString)
```

```
End Try
```

Random methods with no meaning..., ofc the compiler will discard this. another sign of bad programming.

```
Code Private Sub RadioButton1_CheckedChanged(sender As Object, e As EventArgs)
```

```
End Sub
```

```
Private Sub Form1_Load(sender As Object, e As EventArgs) Handles MyBase.Load
```

```
End Sub
```

```
Private Sub RadioButton4_CheckedChanged(sender As Object, e As EventArgs)
```

```
End Sub
```

I see no option to abort the current iteration once it starts to send shit around, none what so ever. So the end-user makes a mistake in 10 to maybe 100, and has no way to stop it, yeah not good ofc.

Dude, pls remove this or correct it, its an shame to put it up there.

I am still working on this and it will be much better. I have already fixed most of this just now. I am

also fixing a lot of other things I've noticed. Such as login check, making the phone number textbox only accept numbers, etc. I was only making this for a single use at first but now I think I'm going to continue this and make it as good as possible. I also plan on changing from radio buttons to a combo box

What you need to do is stop making this kind of crap and start learning the proper way to real programming. This is NOT learning, this is just slapping some controls around and make something loop and im pretty sure u just copied this from somewhere.

Actually I've been learning vb at school I followed the guide for smtp from the book and read the tutorial on hf for the threading. It wasn't really a matter of learning, it was more of me being bored. I appreciate your honesty criticism. How do you suggest I learn more? I'm only in the second year of the course so..

TheBarret - October 1, 2014, 6:01 am

So you figured that learning to develop programs that have as main purpose to harass people is a good way to

learn the programming, that's not how it works son.

Lets assume you do produce a genuine application that is successful into annoying, harassing or even denial someone's service somewhere else and lets assume this person is so pissed off by it hes gonna file a report, and im not talking about a HF abuse report, i mean a real police report. What do you think is gonna happen. People are quite capable of pointing their finger at someone else and they do it as soon as trouble comes to their door steps.

Now im pretty darn sure if you inform your teacher about this, hes gonna tell this same story what i am telling you right now.

So take it from me, if you become bored, check my threads out and im pretty sure you'll find something you have never done before, more challenge more production, and best if you show that you taking initiative to ur teacher by showing that, you will be rewarded for such things, not only on school but most important yourself.

i have spoken. -B
