Thread: [Making an email creator](#)

ModernMoney - October 1, 2014, 6:57 pm

So I decided that making a mass email creator would be a cool idea, and an awesome way to learn. What APIs could I use for web scraping? or are there better ways of doing this

I've never really looked into it but just off the top of my head I'd look into jsoup for parsing the HTML stuff. I think you are going to run into the issue of captchas etc.

Jsoup is great to parse webpages and input data.

I imagine the Java Mail API...

"The JavaMail API provides a platform-independent and protocol-independent framework to build mail and messaging applications. The JavaMail API is available as an optional package for use with the Java SE platform and is also included in the Java EE platform." -
