Thread: [\[TUT\] Stop Generic Detections | Use an HQ Icon! \[TUT\]](#)

Khamul - October 3, 2014, 4:04 am

Ok, so there have been so many people on both Crypter sales and other threads complaining about detections and not being able to get their file FUD even if the Crypter advertizes that it is FUD. This is either due to non-legit assembly info or a Low Quality or detected Icon.

What kind of Anti Virus detections do we class as generic? Well look out for these detections (some are shown below): Generic, Strictor, Luhe.Fiha, Zusy, Barrys, Kazy (sometimes) and a smattering of others.

So here goes! How to get a FUD icon:

The most common way to get icons is by going to [iconarchive.com](#) or some other icon download site. So how do we get a FUD icon? Use a method that not many people use of course! Ok so first off here is a scan of a Crypted file with a detected icon:

6/35 !! Lets all go and flame the sales thread! NO. Nono

1) Go search for an icon that is NOT in .ico format (Use google images) e.g. "Spotify Icon" <-- Can be .jpg, .png or whatever!

EDIT: Try to get an HQ icon (e.g. at least 250x250px or larger!)

2) This should do:

3) Right click and hit "save image as..."

4) Call it whatever you want

5) Go to this site: [image.online-convert.com/convert-to-ico](#)

6) Click "Choose File" and then open your png icon:

7) Now click "Convert File"

The newly created .ico file will be downloaded and then you can use THIS icon with your crypter!!!

Scan after new icon added:

Please leave thanks if this helped!

No reason to post another thread.

Other than that, thank you for contributing, maybe try making headers stand out a little more?

Regards
