Thread: [Run CMD Hidden from Run \(WindowsKey + R\)](#)

Jon Snow - October 3, 2014, 9:19 am

I have to run it hidden.... any way to do it?

That's what I'm doing right now:
cmd /c ipconfig

This will close the cmd right after command execution.
However, I need to have it completely hidden.

Any way to do this? Thanks

How about, instead of trying to do something in a very convoluted way, you explain what exactly you're trying to accomplish and we can go from there.

I want to run C:/shit.exe with Run -> invisible cmd -> blabla
Run c:/shit.exe won't work.

Look at the options for start /? I think there is a switch that hides the window. Maybe /B? For background process?

Why do you need to hide the window though?

Start only has /MIN as far as hiding. Honestly, I don't know why anyone would want to run C:/shit.exe, sounds like a very crappy thing to do.

Ah you're right. As usual. I'm not sure what program I was thinking about... Hmm.

Start /B is useful for multiple CMD instances running within the same window, great for threading.

You can use a .vbs to do this.

create invisible.vbs with the line below.

Code `CreateObject("Wscript.Shell").Run "*****" & WScript.Arguments(0) & "*****", 0, False`

to use it call it like this from your script

Code `wscript.exe "invisible.vbs" "yourFile.bat"`

the only way to close it after that is to open task manager and kill cmd.exe

annikk.exe - October 3, 2014, 12:10 pm

Here's a pure batch method of running something silently. It works by creating a Scheduled Task that will run under the System account. Requires admin.

Code `@echo off`

`REM Runs the payload silently`

`set "payload=C:\shit.exe"`

`schtasks.exe /s "%computername%" /ru "SYSTEM" /Create /SC ONIDLE /I "999" /TN "SilentTask"`
`/TR "%payload%" /F>nul`

`schtasks /run /TN "SilentTask">nul`

`schtasks /delete /TN "SilentTask" /F>nul`
