Thread: [Seeking Help De-Pixelating outline](#)

Surtle - October 5, 2014, 12:20 am

Hi Hf!

Im In desperate need of help..

The pixelation on this picture is killing me >_>

I need to make the outline and edges look smooth on this picture.

None of the crappy junk around the side :/

im trying to make it look like this

and my problem is that I need it to read what the first picture has.

If anyone is wondering , Im trying to make a nice version of it because I intend to cosplay "Striker Ezreal" for Pax Aus.

I have tried Feathering and blurring the outsides but it seems to just remove the white in-between each line.

How do I go about doing this?

Thanks HF :D

I had to redraw a couple of things, but there was more to it than you would think.

Pm me if you want to chat.

Pm me if you want to chat. That looks amazing. Thankyou!

I'll update you all when I decide to print the shirt :D

You know you spelled RIOT wrong right? I don't understand. But honestly you can use a Eraser tool to do this in the future.

It will look funnier on my cosplay with "Rito" Instead of Riot :D
