(Oct 5, 2014 06:37 AM)+Haze Wrote: [\[CITE\]](#) Just paste the bare source code onto pastebin. That'd doo.

Project files can be backdoored, so here; (seems clean)

Form1.vb;

Code Imports System.Drawing.Drawing2D

Public Class Form1

```
Private Sub BlueButtonA1_Click(sender As System.Object, e As System.EventArgs) Handles
BlueButtonA1.Click
    Dim FB As New API
    FB.GrabUserInfo(txtboxUser.Text)
    Dim B As Bitmap = FB.CoverPicture
    B = CropBitmap(B, 0, (FB.CoverOffset / 100) * (FB.CoverPicture.Height - FB.Cover.Height),
    FB.CoverPicture.Width, FB.CoverPicture.Height - (FB.CoverOffset / 100) * (FB.CoverPicture.Height
    - FB.Cover.Height))
    B = ResizeProportionally(B, FB.Cover.Width)
    FB.Cover.BackgroundImage = B
    FB.GrabUserProfile(2)
    FB.Profile.BackgroundImage = FB.ProfilePicture

    lblName.Text = "Name: " & FB.Name
    lblGender.Text = "Gender: " & FB.Gender
    lblID.Text = "ID: " & FB.ID
    lblUsername.Text = "Username: " & FB.Username
End Sub

Private Function CropBitmap(ByRef bmp As Bitmap, ByVal cropX As Integer, ByVal cropY As
Integer, ByVal cropWidth As Integer, ByVal cropHeight As Integer) As Bitmap
    Dim rect As New Rectangle(cropX, cropY, cropWidth, cropHeight)
    Dim cropped As Bitmap = bmp.Clone(rect, bmp.PixelFormat)
```

```
Return cropped
End Function
```

```
Private Function ResizeProportionally(ByVal bmp As Bitmap, ByVal Finalwidth As Integer) As
Bitmap
    Dim i As Double = (Finalwidth / bmp.Width)
    Dim finalH As Integer = i * bmp.Height
    Dim newImage As Image = New Bitmap(Finalwidth, finalH)
    Using graphicsHandle As Graphics = Graphics.FromImage(newImage)
        graphicsHandle.InterpolationMode = InterpolationMode.HighQualityBicubic
        graphicsHandle.DrawImage(bmp, 0, 0, Finalwidth, finalH)
    End Using
    Return newImage
End Function
```

```
Private Sub BlueTheme1_Click(sender As Object, e As EventArgs)
```

```
End Sub
End Class
API.vb;
```

```
Code Imports System.Net
Imports System.IO
Imports System.ComponentModel
```

```
Module Web
```

```
Public Function DoGetReq(ByVal link As String, ByVal referer As String, ByRef logincookie As
CookieContainer, Optional ByVal Proxy As WebProxy = Nothing) As String
    Try
        Dim Request As HttpWebRequest = DirectCast(WebRequest.Create(link), HttpWebRequest)
        Request.Method = "GET"
        Request.Referer = referer
        If Not Proxy Is Nothing Then
            Request.Proxy = Proxy
        End If
        Request.CookieContainer = logincookie
        Request.UserAgent = "Mozilla/5.0 (Windows; U; Windows NT 5.1; de; rv:1.9.2.3)"
        Request.ContentType = "application/x-www-form-urlencoded"

        Dim Response As WebResponse = Request.GetResponse()
        Dim S As Stream = Response.GetResponseStream()

        Dim reader As New StreamReader(S)
        Dim Source As String = reader.ReadToEnd()
        reader.Close()
        Response.Close()

        Return Source
    Catch ex As Exception
        Return ""
    End Try
End Function
```

End Module

Public Class API

```
Public ID As String

Wow good job, you looks at one source file, doesn't make it safe or not. The exe file that was detected could still be a virus.

I thought you were more HQ.

What are you saying? Do you even know how to open any decompiler and look by yourself it's not a virus?

(Oct 5, 2014 09:14 AM)Only3 Wrote: [\[CITE\]](#) Woow u reply to LordCoder I thought you were more HQ. i can backdoor empty project ??? < not ^^
Just no.

TheBarret - October 6, 2014, 9:48 am

i Lol'ed at:

Code Dim i As Double = (Finalwidth / bmp.Width)

Dim finalH As Integer = i * bmp.Height

Strict mode will have your ass for that ^^

Just replace the / for \ that operator discards the decimals and returns the division as int32.

You're literally just not smart. At all. He just through it into a decomp, showing the packaging(sorry java d00d), we can clearly see that nothing more is happening aside from what he's advertised.

Please, learn your shit.
