Thread: [Rage booter Source - curl shells for db](#)

Possibilites - October 5, 2014, 7:55 am

I have all the shells for my booter, which uses rage booter source, in it's mysql database in a table named shells, the column name is url. I need help with getting the shells to hit the target ip when the user clicks the "DDoS" button on hub.php, I understand this requires curl but I don't know what code to add to do this. My current hub.php is below

PHP Code

```
<?php
ob_start();
require_once 'includes/db.php';
require_once 'includes/init.php';
if (!($user -> LoggedIn()))
{
    header('location: login.php');
    die();
}
if (!($user->hasMembership($odb)))
{
    header('location: purchase.php');
    die();
}
if (!($user -> notBanned($odb))
{
    header('location: login.php');
    die();
}
?>
