Thread: [+Source - Simple Blog Control Panel](#)

Adolf Hipster - October 7, 2014, 12:50 pm

Well, this is just something I want to share with you guys.
Its like an offline control panel for your website.

This can do the following;
Create new post

List all posts on site currently

Delete Posts

There is just one catch, for this program to function properly, you have to stick with a premade html source code that I include with this source.
Dont be mad though, you can still design and add stuff to the html file I give you BUT you cannot change ONE specific thing.

Here's how the index.html looks like

```
Code <!DOCTYPE html>
<html>
<body>
<div id="wrapper" style="margin:0 auto;
width:1100px;background-color:red;height:auto;padding-top:10px;padding-bottom:40px;-webkit-bord
er-radius: 10px;
-moz-border-radius: 10px;
border-radius: 10px;">
[b]<!--[b] AFTER THIS COMMENT YOU CAN ABSOLUTELY NOT DO ANY CHANGES -->

[b]<!--[b] NEW POST HHERE -->

[b]<!--[b] FROM THIS POINT YOU CAN DO HOW MANY CHANGES YOU WANT --></div>
[b]<!--[b] END WRAPPER -->
</body>
</html>
```

Any changes made within the "no go" area will cause bugs with the program. But anything else is OK such as styling the wrapper and/or adding other stuff.

This is what the program looks like.

Spoiler [\(Click to View\)](#)

Nothing fancy as I had no plans doing anything special with this source.

Here's a gif of the program in action

Spoiler ([Click to View](#))

Also, if you add one post, save it, close it and open the same index.html file with the program it will automatically find that you had a post already and add it to the posts listbox so you can easily remove if you like.

And! the source code is messy as fuck, i know, this is the result of too much caffeine and boredom, in other words this could have been done much better so no need to state that in the comments.

This is only for the ones who want it, not forcing it on anyone.

There are some bugs which you'll find but i can't be assed actually, why not make a super version of this and maybe sell it? ?

[Download link](#)

IF there are any questions ask me here on the thread i'll try to explain for you haha.

Zeivu~ - October 7, 2014, 1:05 pm

Thanks for this don't know i will use
But it might come in handy
Well Done <3

ByteCapone™ - October 7, 2014, 1:12 pm

Looks pretty nice. Could be pretty useful if you're against wordpress and blogger and prefer your own code.

But you didn't include the .sln in your download.

Oh, I'm sorry.
It's fixed now.

Thanks for notifying me.

TheDeceptionist - October 8, 2014, 3:44 am

Actually this is a pretty good idea. I'd like to see this develop further.
Good luck.

nuk - October 8, 2014, 5:07 am

I clicked on this expecting to not like it... and I'm eating those words now. This is pretty damn nice :)
Thanks for sharing this :)

Glad you liked it.

@to everyone else:

Here's something you can do.
Make it so you can edit existing posts.

I got a way to do this, try to see if you can fix it yourselves :)
Hint, each item in the list menu is in this format "PostTitle(PostBody)"
Combine that info with .Replace and you will get the job done :)

PapaBeans - *October 8, 2014, 10:37 am*

Cool idea, will use for sure! Thank you for your contribution.

Guede - *October 8, 2014, 10:38 am*

PHP Code

```
<?php
<div id="wrapper" style=
"margin:0 auto; width:1100px;background-color:red;height:auto;padding-top:10px;padding-bottom:4
0px;-webkit-border-radius: 10px;
-moz-border-radius: 10px;
border-radius: 10px;">
```

just contracted cancer from your inline css ty.

Haha lmao wasnt going to have inline css actually at all.
It's easily fixable for someone that knows what they're doing though.

Thanks to the guy who voted this 1 star -_-
