Thread: [Installation Tutorial](#)

Nasyr - October 7, 2014, 7:42 pm

So today we are going to be doing a full MyBB installation.

The version we will be installing is MyBB 1.6.15.

So first of all you'll need the MyBB Files, download them here - [DOWNLOAD](#)

Once you have those you'll need a hosting, I'll be using SPAM since this is a tutorial - [SPAM](#)

STEPS

Step 1

Sign up at SPAM and then click to add a new website and do as I have done below.

Then click to create the account.

Keep refreshing till the account is made, it only takes a few seconds.

Step 2

So now you have the MyBB files and now you have hosting so lets jump forward and locate MySQL
Once you have found that quickly make the database.

Step 3

Locate File Manager and enter it, then locate public_html and enter there.
Once in click to upload files.

Upload the .zip file you have downloaded with MyBB and then extract it.

UPLOAD

Go back to the public_html and find the Upload folder.

Select all the files in the Upload folder then click "Move".

You now want to remove the highlighted part shown below and click the Tick.

Step 4

Now the installation begins!

Go to your domain and it'll show the following.

Go to domain/install

Step 5

You will now see this appear, if it shows up your doing well!

Follow the onscreen instructions till you hit Database Configuration

Remember the Database you made? Now it goes into action!
So go gather those details if you didn't already have copied them down.
Fill it in nice and simple.

Step 6

Once you do the rest of the Database follow on with the set-up till you hit Board Configuration

Change the "Forum Name", "Website Name" and "Contact Email".

Step 7

Now create your Admin account and your basically done.

Step 8

Finish the Set-Up and your done!

Once it's done visit your forum and it should look like this: [PREVIEW](#)

tl;dr

Looks like a great tutorial, I've done this before so didn't need to read, but glad you're helping out the community! :)

Hi, i would like to show you a site where they have myBB but their layout is really nice. It's almost like hackforums however a bit different. I would like to ask you if there is any free way to obtain the layout etc. PM me and i'll give you the link. I don't want to post it here as i don't know if it's against the rules somehow.
