Thread: [PSN Cracker Source by Carter](#)

Mr. Carter - October 11, 2014, 4:47 am

Well This is base for an cracker, its pretty easy to edit into anything really. Also big thanks for DeadLine's MC Brute for the socket, so it didn't need much more work when I got that. That's mostly the reason i'm sharing this source, hope people can learn and build more from this. The functions are also pretty nice I implemented them in, you can repeat em to every listbox you add (Remove Dups, Load, Save, Clear).

Screenshots,

Virustotal,

<https://www.virustotal.com/en/file/f9a8fbd05efd8da037c87b808ba2dc3a0112f549c894eeb981e0cfed7df86539/analysis/1413027932/>

I'm not sure why its saying it as trojan on AegisLab, that's just the source, I removed the bin.

Download,

Code <https://www.sendspace.com/file/avq1du>

Vouch He Is Legit And No Virus Or Rat Found ;)

Robert Downey Jr - October 11, 2014, 5:04 am

Thanks for this op. I was actually searching for a working source:)

\$lick - October 11, 2014, 6:04 am

Project files can be backdoored.

Here are the files;

Main.vb: <http://pastebin.com/0gEv6EgD>

Functions.vb: <http://pastebin.com/vneiSwr4>

Didn't really do shit to em, tho yeah thanks for the links, ill add em in the thread if someone doesnt want to download it.

WZDY - October 11, 2014, 7:10 am

You could just use Sentry MBA to do this but thanks for the share anyway.

Sedo - October 11, 2014, 7:11 am

That trojan kinda gave me some chills so i would like to hear on other people using this.

Yeah I know, tho this is base for a cracker you can edit it into anything really :P

Cairns - October 11, 2014, 9:40 am

Why the hell are you using "RefreshIESettings" method to change proxy with a HTTPWebRequest? the HTTPWebRequest already has proxy support you can use without fucking up Internet Explorers proxy registry value

Mr. Carter - October 12, 2014, 12:50 am

Since its a smaller job lol, I do know httpwebrequest does have a fucking proxy support, y a ginger srsly. Works the same way as httpwebrequests proxy support, just easier to implement them. I did also add the httpwebrequests proxy commands there lol, should watch more carefully.

24/7 - October 12, 2014, 2:20 am

Thanks for this, the source is helpful to me!

Cairns - October 12, 2014, 8:48 am

When coding you stick to one method for one purpose. Do you have any idea of the difference between the httpwebrequest proxy class and changing internet explorers proxy? They are both completely different and used for different purposes. Therefore even if you are using httpwebrequest proxy class (in some parts of your code - which I never bothered looking at because skimming through it was enough to make me sick) then your cracker isn't even stable and it has a chance of exposing your IP address to the server it's attacking because changing the internet explorer proxy is not stable, and it's very slow. Moral of the story is, the code is all over the place and it's terribly written.

I knew I had seen that shitty method of coding with the functions.vb.

Welcome back, Treva

Code smartly next time

nuk - October 12, 2014, 12:58 pm

This isn't that good or that bad.... like he OP said; it is a nice start for someone to improve on. Nice share never-the-less :)

Mr. Carter - October 12, 2014, 11:25 pm

It doesn't really matter how I did it since I did release the source like you saw, those who got it can always make it better.
