Thread: [MenaPE \(RunPE Class\)](#)

Menalix - October 12, 2014, 12:07 pm

removed content do to leeching.

Cornflower Blue ???-? — - October 12, 2014, 12:11 pm

That code looks ALLOOOOT like Aeons RunPE, just saying...

Menalix - October 12, 2014, 12:12 pm

(Oct 12, 2014 12:11 PM)Cornflower Blue ???-?— Wrote: [\[CITE\]](#) That code looks ALLOOOOT like Aeons RunPE, just saying...It's also highly inspired from AeonHacks RunPE. My old RunPE was a mess, and when I saw AeonHacks source I couldn't help myself about sorting it in a different way, and I couldn't see a reason why I would need to anyway.

And this:

```
Code Public Function Run(ByVal path As String, ByVal payload As Byte(), ByVal creationflag As Integer) As Boolean
```

```
    For I As Integer = 1 To 5
```

```
        If HandleRun(path, payload, creationflag) Then Return True
```

```
    Next
```

```
    Return False
```

```
End Function
```

Is kinda directly taken from AeonHack, a creative way of making it stable.

Cornflower Blue ???-? — - October 12, 2014, 12:15 pm

<https://www.diffchecker.com/diff>

Just run Aeon's code and Menalix's code on here, only thing you have changed is some names, added comments and reordered some things.

How skiddy.

Menalix - October 12, 2014, 12:17 pm

You can take any RunPE and do that, RunPE's works the same way.

If you actually looked the code trough you would notice how different it is, since we can do x64 to x86 injection.

The API's is named after msdn, that's also pretty normal.

That's how it's written on msdn:

[http://msdn.microsoft.com/en-us/library/windows/desktop/ms682425\(v=vs.85\).aspx](http://msdn.microsoft.com/en-us/library/windows/desktop/ms682425(v=vs.85).aspx)

I don't waste time to change it away from it's original ways.

So if people suddenly now Declare API's the same way (correctly) after msdn, its copied, haha joke.

Nope I'm saying that's what mostly people would do when declaring an API, unless they look it up with a Dissambler instead of using msdn.

\$lick - October 12, 2014, 12:25 pm

Like I said the way I stabilize the RunPE is directly taken from AeonHack.

You are showing how I use API's the same way as AeonHack? API's can't really be used different.

Then you might aswell take a picture of how I use VB functions the same way.

(Oct 12, 2014 12:31 PM)Cornflower Blue ???-?— Wrote: [\[CITE\]](#) Stop trying to defend the fact that you are a copy/paste skid.

Mhhhmhhh right I am, idiot ?

Must be good copy-paste though, since I actually can explain everything with comments, and know how to read around in the PE Header and manipulate with the .NET file to make x64 to x86 injection possible.

You're just butthurt because you lick AeonHack in the ass, and his you finally notice that AeonHacks code actually can be improved.

If I wanted to hide the fact that this is highly inspired from AeonHack, I would probably have tried

to do something about the code.

And I didn't sell it to anybody, I denied people who asked as RunPE sources is very public there's several of public ones, the only difference is they are not stable do to not having an exception checking for loop.

Which AeonHack then ripped people from 200euro, to pay for. As I didn't find a for loop any worth 200euro, I forced him down to make his source public, by making a sales thread about mine being a lot better.

IAmNotHere - October 12, 2014, 1:15 pm

I am not a coder. The best in the thread for the rest.

Using a x32 system, and the correct flags. Aeon's RunPE works.
If you read the tutorial you would know this is only for .NET exe's
We don't set the ThreadContext which is needed for Native files to work.

I don't see why it's necessary to "inject" a .NET, unless that specific piece of malware or application needs its own host.

Only3 - October 12, 2014, 1:59 pm

Aeon Usage

'Dim Target As String = Application.ExecutablePath 'vbc, csc, msbuild, etc should all work too.

'Dim Command As String = String.Empty 'We could pass in custom command line args here.

'Dim Data As Byte() = My.Resources.SomeData 'This should be the module we want to execute.

'Dim Compatible As Boolean = False 'Leave this set to false unless injection fails.

I know how to use Aeon's... That's not what I'm talking about.

SIM-1456245 - October 12, 2014, 2:03 pm

Wait wait wait. You are all arguing how this is copied from Aeonhack. It might be, it might not be. I cannot say a thing there, but, but, did you forget that there was a sticky in this section by a guy named Menalix, wonder who he is, that was selling a RunPE that can inject into anything. And now the source, that is kind unfair ha ? And the same thing happened with Aeonhack's RunPE, you said on his thread that you have paid a lot of money for it, now here releases it for free, now you do the same thing. That is unfair man, just saying.

? Nope you misunderstood by question.

I asked if CreateToolHelp32Snapshot, didn't provide an option to whether check if a module is 32bit or 64bit, because I find it wierd that it doesn't. I figured it just doesn't. I know how to figure if its 32bit or 64bit, that's easy. I was just wondering why CreateToolHelp32Snapshot didn't have such option, since you can decide to enumerate 64bit or 64bit and 32bit when in a 64bit process.

And I still find it wierd, that there's no such option.

IAmNotHere - October 13, 2014, 1:03 pm

I recall a thread of "CreateToolHelp32Snapshot".

Can you on runtime debug a small piece of the code to asm, read the values and let the program give the correct values?

Or am I talking shit here?

Menalix - October 13, 2014, 1:07 pm

Good work op.

To be honest, I couldn't agree with you more. Improvements of sources is actually a great topic for a discussion. After all, we are a forum, and good talks about source codes are always interesting. That's how I see it. Oh and let us not forget his explicit mentioning of the original author.

The only way this argument could be solved is to ask Aeonhack himself if he is okay with this release. If he is, there is nothing to worry about the source being copied or not. If he isn't, I would highly suggest Menalix to take measures.

Well the source isn't copied.

My RunPE was build based on Bawneeh's RunPE. Bawneeh's RunPE is very based on the Marshal Class's methods, I then worked from there ported it to work like this release does, later bought Aeonhacks source to figure out the For Loop for stabilization, Then Aeonhack later released the source for his RunPE and I choosed to make this tutorial explaining how to make Aeonhacks RunPE work like my release: <https://hackforums.net/showthread.php?tid=4432024> in order to make this tutorial I re-coded my RunPE based on Bawneeh's while using AeonHack's RunPE as template and I now then later released it.

So no wonder it looks like AeonHack's RunPE when that is what I wanted it to be.
I couldn't see why I should release my original based on Bawneeh's source, because it's clearly a lot worse.

This RunPE doesn't work with Native EXE's either, only managed and compiled bit types, so its a lot different in practical, but on paper no because AeonHacks RunPE's was the "template"

(Oct 12, 2014 12:32 PM)Menalix Wrote: [\[CITE\]](#) Mhhhhmmmm right I am, idiot ?

Must be good copy-paste though, since I actually can explain everything with comments, and know how to read around in the PE Header and manipulate with the .NET file to make x64 to x86 injection possible.

You're just butthurt because you lick AeonHack in the ass, and his you finally notice that AeonHacks code actually can be improved.

If I wanted to hide the fact that this is highly inspired from AeonHack, I would probably have tried to do something about the code.

That means you know theory too the language, doesn't mean you're a programmer.

.NET Programmer

Menalix - November 5, 2014, 7:26 pm

(Nov 5, 2014 12:53 AM)Baked Wrote: [\[CITE\]](#) That means you know theory too the language, doesn't mean you're a programmer.

.NET Programmer

I know theory to windows and programming, have been coded in .NET language in 6 years I'm a programmer, and run the 5 most successfull csgo cheat, with 500 active customers, bypassing any Anti-Cheat out there. (Anti-Cheat bypassing is a lot harder than AV shit).

So just shut up lol. The .NET scene is so hilarious here on HF, that I am actually the only one who has made a tutorial on native hooking: <https://hackforums.net/showthread.php?tid=4491019>, pretty much tells how lol it is.

Beside that RunPE's has nothing to do with the "Theory too the language" it's about how PE's is constructed and understood." <- The fact like only 5% knows how here, is also damn hilaruious.
