Jon Snow - October 19, 2014, 8:34 am

i.php is my shell.

<https://i.imgur.com/MP04Gvv.png>

I want to read flag.php

<https://i.imgur.com/7ttn4LU.png>

How can I do that? If I try to access it directly, I get Permission denied (/flag.txt)!

Thanks a lot!

Did You Try To Create Symlink or Hardlink?

Just did and it doesn't work...

Any other ideas?

You could try using this code;

PHP Code

<?

include /path/to/flag.txt;

?>

Then view the page source, I've used this trick to read a few config files before.

You could also try copying the contents to a new file;

PHP Code

<?

echo copy("flag.txt","flagnew.txt");

?>

~Sky ?
