Thread: [\[Facebook trick\]Learn how to see who looks at your Facebook!](#)[\[Facebook trick\]](#)

Recycle Bin. - October 22, 2014, 7:35 am

First we must understand this trick. This trick will give you an insight into who views your profile, but Facebook isn't confirming exactly who they are. This list that Facebook keeps is determined by a variety of factors: who comments on your posts, who you message frequently, who looks at your Facebook the most often, and who are commenting and more.

First you need to understand that there is no way to see JUST who looks at your page the most. Any app/.exe which says that it can tell you that, is lying and a scam.

The only way to know if people are looking at you're facebook is for example, if you look out for people showing up towards the top of the list who you know you don't message and you don't comment on their stuff. If someone you never interact with shows up pretty high on your list, you'll know it's because they're looking at your page.

1. Open your web browser. You will need one which allows you to view the source code for a website. Google Chrome is one of the easiest.
2. Go to you're Facebook and then click on your name in the upper-left corner underneath your profile image.
3. Now if you zoom you're image out to about 90%. You should be able to right click in a "empty" space in the left corner. Right click and select view source code.

[img]http://imagizer.imageshack.us/v2/640x480q90/538/rRPh0P.jpg[/img]

4. If If you are using Google Chrome, which I do, right-click the background and choose "View page source". Other browsers usually have this option under the "View" menu.

5. You can use the webpages search function. This tool will search all of the text on any given page for the term you type in. Now type; Code InitialChatFriendsList

[img]http://imagizer.imageshack.us/v2/640x480q90/540/9qADyu.jpg[/img]

6. The numbers which you will immediately see after you've hit enter are the identification numbers of the profiles of your friends. Copy the string without the - and the final number. Paste this after the ".com/" when looking at the main Facebook page. This will bring up the profile so you know who it belongs to.

I hope you guys enjoyed this little trick. There is probably many of you who already knew it. ?

Multiple - October 22, 2014, 7:37 am

Going to try this out now, thanks bro for sharing.

w34k - October 22, 2014, 7:39 am

Copy and paste more ? This is quite old and also not true...

Recycle Bin. - October 22, 2014, 7:40 am

It is true maybe you should try and read my thread. Maybe it's old? So what? Many fun facts and tricks are old but still gold. ?

w34k - October 22, 2014, 7:51 am

I did read it, that's why I'm replying. It's a myth that's been out for years. I've tested it. How is it gold if it doesn't work ? ?

Nice to see you trying.

Nice to see you trying.Ahaha... No sir it's not a "myth" it really works.

If you claimed that you've tried it you would know it works. Try to read the post again, and if you still have problems PM me and I'll help you over TV.

w34k - October 22, 2014, 1:29 pm

I'm claiming it's false. I've tested it with real accounts and dummy accounts long ago. It's the same copy and pasted method all over. I won't go back and forth with you on this. I know what I know and I'll let you believe what you want. Have fun. ?

Mutes - October 22, 2014, 5:30 pm

Sorry to burst your bubble, but it's false.

I tried something similar years ago.

What it does is it basically uses the people you talk to or communicate with the most.

It may work now, I do everything on mobile, so I can't test it.

lakalaka - April 11, 2015, 8:56 am

lol.. this is for the chat you can check the code InitialChatFriendsList

it just shows the first names on your right at the chat screen..for example who you talked before who you added last and anyway your latest activities

Luciferum - April 11, 2015, 11:53 am

Thanks man this is cool! It worked for me.

bobbobbybobman - April 11, 2015, 8:38 pm

Oh this is really cool thing thanks :)

BMW - April 12, 2015, 4:10 am

Nice one, thanks.

Does it sort it out with the latest person viewing your profile or list is not in any order?

infernal775 - April 12, 2015, 1:14 pm

No this one is only to show you as it's called your friendlist like the people who are connected ...

wwn.wnn - May 15, 2015, 5:59 pm

thank you so much this works!!!

Blindspot - August 13, 2015, 2:33 am

Thank you ! Very handful. I hate all them fake scams and time wasting tricks that never worked.

Strayta - August 13, 2015, 3:31 am

So does this work? Was wondering

CubicMuffin - August 13, 2015, 5:33 am

Okay so first thing; InitialChatFriendsList kinda does what it says on the can. It's the first couple of [Facebook] friends on your chat list. These could be favourites, or just people you talk to regularly. This has nothing to do with who views your profile.

Second thing is that you can just right click anywhere, you don't have to specifically click underneath your name in the top left corner (I think that's what you were saying anyway). You can click anywhere. Heck, just type in view-source:https://www.facebook.com/ in Chrome and it shows you immediately.

Viktory - August 13, 2015, 5:54 am

took the words right out of my keyboard, I really appreciate the effort you make around these areas man.

also you guys should look at the post date before bringing up a shitpost next time

Hydraulic - August 13, 2015, 6:00 am

Thanks for sharing, I haven't tried it yet but I'll be sure to do so if I feel like finding out who's stalking me.

Thanks, I like to feel like I'm helping the community :)

Prog Snob - September 5, 2015, 12:22 pm

I fell for this one the first time I saw it a couple of years ago. It's definitely not true. Like it was stated above, it has something to do with your Facebook chat list.

FGO57 - September 5, 2015, 2:51 pm

I just tried it and yes it's more likely that people you often chat with will be on the top of the list, but I have some people I haven't heard for years with, and they are in the top 15 on that list...

Don't know how this is working, but maybe sometimes you could see who is visiting your profile more often, I don't know.

I like this trick, and thanks for posting it OP! ?

P.S. I'm curious about that '-2' number, like '100003818844545-2' what that number means? 'cause its different for every profile ID

SysAdmin - September 5, 2015, 3:53 pm

I've noticed that the "9 Friends List" that you have on your profile actually does update depending on the amount of time you two have talked and liked/commented their stuff.

Bn_Sallal - September 5, 2015, 7:32 pm

thank you very much 3>3>3>3>

timmunchen - September 7, 2015, 7:31 am

This is not true !!!!! It's been proven wrong over and over. I am sure there isn't a way to achieve it

bebesurf - October 27, 2015, 7:30 am

Thanks a lot dude ! It works :P !

sidz - October 27, 2015, 8:01 am

Jus tried this.. its the same list of ppl which come when my chat is turned off .. but thanks anyway..

CubicMuffin - October 27, 2015, 8:10 am

(Oct 27, 2015 07:30 AM)bebesurf Wrote: [\[CITE\]](#) Thanks a lot dude ! It works :P !
It does not work haha. Read the entire thread first.

Purest. - October 27, 2015, 10:12 am

Pretty cool tutorial, thanks seems to help some people.

alexenergy - November 5, 2015, 9:37 am

Is this still wokring man?

Thank you if it is.

bananna - November 5, 2015, 9:44 am

InitialChatFriendsList show people you interact with the most and it has nothing to do with who views your profile.

joker.1211 - November 5, 2015, 11:31 pm

yeah !!!! i think , i need it. tks bro ^^!

dogwalker - December 12, 2015, 7:09 am

If you search [friendslist] then check the numerical results there in the same way this example suggests you get an accurate result of page views. You can only see when people you are friends with check your profile but it does work...well as far as I can see. Does anybody else have any information on this?

Caliban - *December 12, 2015, 7:50 am*

Dont bother doing this. It is not an accurate representation of who viewed your profile. Only facebook knows this data.
