Thread: [How to install Cydia on iOS 8 \(Via SSH \)](#)

Vince - October 22, 2014, 1:25 pm

[img]http://cdn.ios8jailbreak.org/wp-content/uploads/2014/07/pangu-jailbreak-ios-8-iphone-5s.png[/img]

1. Download the Cydia deb file

http://api.viglink.com/api/click?format=go&jsonp=vglNk_141400842962213&key=c3a020c1da88216e0e531635c6550b00&libId=a51a2569-2218-468c-871b-c574a543789e&loc=http%3A%2F%2Fwww.iphonehacks.com%2F2014%2F10%2Finstall-cydia-ios-8-1-pangu-jailbreak.html&v=1&out=http%3A%2F%2Fcache.saurik.com%2Fdebs%2Fcydia_1.1.13_iphoneos-arm.deb&ref=http%3A%2F%2Fwww.reddit.com%2Fr%2Fjailbreak%2Fcomments%2F2k0vg4%2Fhow_to_install_cydia_on_ios_8_ios_81_after_using%2F&title=How%20to%20install%20Cydia%20on%20iOS%208%20-%20iOS%208.1%20after%20using%20Pangu%20Jailbreak&txt=from%20this%20link

2, Download cydia-lproj file From here

http://api.viglink.com/api/click?format=go&jsonp=vglNk_141400849819816&key=c3a020c1da88216e0e531635c6550b00&libId=a51a2569-2218-468c-871b-c574a543789e&loc=http%3A%2F%2Fwww.iphonehacks.com%2F2014%2F10%2Finstall-cydia-ios-8-1-pangu-jailbreak.html&v=1&out=http%3A%2F%2Fapt.saurik.com%2Fdebs%2Fcydia-lproj_1.1.12_iphoneos-arm.deb&ref=http%3A%2F%2Fwww.reddit.com%2Fr%2Fjailbreak%2Fcomments%2F2k0vg4%2Fhow_to_install_cydia_on_ios_8_ios_81_after_using%2F&title=How%20to%20install%20Cydia%20on%20iOS%208%20-%20iOS%208.1%20after%20using%20Pangu%20Jailbreak&txt=from%20this%20link

3 - Now you need an SSH Program - For Mac Google CyberDuck ... For Windows Get Winscp

4 - Once you have your SSH program Installed Next you want to get your iDevices IP Address - Settings - WiFi - then click the BLUE ! on your WiFi Name and you should see the IP

6 - Now Open your SSH Program and in the Address put your iDevices IP.. In User put "root" and for Password put "alpine" (Both without the " ")

7 - Now once you are SSH into your Device go to Private - Var - Root - Media.. In the Media section make a new folder called "Cydia" then in the Cydia folder make anohter folder called "AutoInstall"

8 - In the "AutoInstall" folder drag and drop both of them files you D/Led

9 - Now Once you have dragged and dropped them 2 files you need to open the command section On WinSCP its the little black box.

10 - In the command box paste "dpkg -i cydia-lproj_1.1.12_iphoneos-arm.deb" then press Execute then paste this "dpkg -i cydia_1.1.13_iphoneos-arm.deb" and press execute again (if you get any error in the box its ok i did and cydia is working fine..

11 - Once you have done both of them commands just close out of everything then reboot your iDevice and you should see Cydia

Note - Not alot of stuff will work as it will need to be updated for iOS 8

My iPhone running Cydia on 8.1

Aight,

Thanks for sharing this mate =)

Edit: Step 6 didn't work for me, it won't let me connect.

Hey! Make sure you jailbreak the device first, so you can actually access through terminal.

Yes, you need to follow the other guide to jailbreak iOS8. Be warned, not many things are updated, and cydia is most likely going to be updated here soon.
