Thread: [MY VB.NET SPAMMER \(NO TIMER, NO BUTTONS\)](#)

AEDEAD - October 26, 2014, 10:17 am

WHAT IT DOES!

- FOR EACH LINE IT "ENTERS" AT THE END OF IT
- SENDKEYS CURRENT LINE OF TEXT IN RICHTEXTBOX
- HOTKEYS REGISTERED ON MAINFORM
- HANDLE SENDKEY SYNTAX (REPLACE FUNCTION)
- HANDLES SPAMMING THE RICHTEXTBOX WITH SPAM (MAKES IT READ ONLY IN THREAD, THEN MAKES SURE IT DOES THE THREAD WITH DOEVENTS AND THEN MAKES IT FALSE)

FONTCOMBOBOX ISN'T MINE (LETS YOU CHOOSE ALL FONTS YOU HAVE, THIS IS FOR ASCII ART PURPOSES)

SOURCE CODE: <https://www.mediafire.com/?orwqp6bha2g65g3>

I'M THE BEST PROGRAMMER ON THESE FORUMS.

EDIT: If your computer has special hardware and can't repeat the F5 Key, register another hotkey and create a boolean then Freeze the thread.

```
While B = True
SpamStuf
End While
```

Programming - October 26, 2014, 10:18 am

Good job I guess?

There are like 999999 of these here already.

AEDEAD - October 26, 2014, 10:26 am

Nope they use timers. Do not belittle me.

Programming - October 26, 2014, 10:27 am

(Oct 26, 2014 10:26 AM)AEDEAD Wrote: [\[CITE\]](#) Nope they use timers. Do not belittle me.
So you used a thread instead of a timer?

Either way it's just a spammer like the 999999 other spammers here.

AEDEAD - October 26, 2014, 10:27 am

Either way it's just a spammer like the 999999 other spammers here.

```
Code Public Sub SpamText()  
    RichTextBox1.ReadOnly = True  
    Lines = RichTextBox1.Lines  
    If Lines.Count > 0 Then  
        For Each strLine As String In Lines  
            SendKeys.Send(HandleSendKeys(strLine)) : SendKeys.Send("{ENTER}")  
        Next  
        Application.DoEvents()  
        RichTextBox1.ReadOnly = False  
    End If
```

Nikey646 - October 26, 2014, 10:36 am

[Yup. You are the best programmer on this forum. Totally.](#)

In the mean time, i'll go nd code something useful, that doesn't use SendKeys. (And maybe laugh at your source code.)

AEDEAD - October 26, 2014, 10:37 am

I am... it's using Sendmessage and it's for a bot. Should I post that here again too?

Nikey646 - October 26, 2014, 10:46 am

(Oct 26, 2014 10:37 AM)AEDEAD Wrote: [\[CITE\]](#) I am... it's using Sendmessage and it's for a bot. Should I post that here again too?

No thanks. Looking at the source of this, it's horrid. I've seen better from C&P Scrubs.

Also, There is no Threading in this. You call a sub whenever F5 is pressed.

You also handle everything on the UI Thread. Looking for HotKeys, Sending the Message, and trying to tell the application to Process other events via Application.DoEvents()

Also, this isn't a spammer...You have to press F5 every time you want it to send a Message. At least create a loop on another thread based on a Boolean, and when F5 is pressed, it'll toggle that Boolean (And Start the Thread is required)

Oh, and you will probs encounter major problems with this code, once you start getting a large amount of text:

```
Code Private Sub RichTextBox1_TextChanged(ByVal sender As System.Object, ByVal e As  
System.EventArgs) Handles RichTextBox1.TextChanged  
    Try : RichTextBox1.Font = New Font(FontComboBox1.Text, SizeTxt.Text) : Catch ex As  
Exception : End Try  
End Sub
```

Edit: Also, if you press F5 without putting anything into the RTB, you'll break the program. DEFINITELY the best programmer in this forum. There's no question about it. 10/10 would hire.

SIM-1456245 - October 26, 2014, 11:00 am

gr8 now fix ur kbd

Great now fix your keyboard.

AEDEAD - October 26, 2014, 12:00 pm

(Oct 26, 2014 10:46 AM)Nikey646 Wrote: [\[CITE\]](#) Also, this isn't a spammer...You have to press F5 every time you want it to send a Message.

You hold F5, it spams.

With larger texts of spam, like what I do is type

.
..
.
..

and c/p that for a very long time then I hold F5 for a couple of seconds and let go and I'll continue spamming a chat until I, or the Host of the chat lags out.

Also even if you tapped the F5 button, you would still be SPAMMING multiple lines of text, so either way it is a spammer.

Nikey646 - October 26, 2014, 12:17 pm

(Oct 26, 2014 12:00 PM)AEDEAD Wrote: [\[CITE\]](#) --snip--

That'll only work with Mechanical Keyboards. If you use a membrane keyboard, it won't continuously send the KeyPress, and will only result in it being sent once.

And who the hell wants a spammer where you have to manually tell it to spam? All you are doing is sending multiple lines of text. Nothing new, nothing revolutionary.

Also, your solution to creating an Endless Spam from x1 F5, is more likely to freeze the application than anything else. As i stated, once a large amount of text is in the RTB, then your Font Update on the RTB1.TextChanged Event, will freeze the form. This will get longer and longer, the more text you put into the RTB.

Oh and, I just noticed this post:

(Oct 26, 2014 10:26 AM)AEDEAD Wrote: [\[CITE\]](#) Nope they use timers. Do not belittle me.

Those Spammers are about... 999999 times better then yours. They use a Timer...for a Repetitive Task...that should be Repeated...Multiple Times....Oh wait. They used a timer for what it was designed to be used for. Repeating a simple task multiple times.

Not going to dispute my other points either? You claim to be the best programmer on this forum, yet all you've shown is a poorly made spammer which is barely functional, and requires user input (or special hardware (Keyboard which will re-send a KeyPress when held down)) to function as a proper spammer.

How about you edit that first post? Changing it from Spoiler [\(Click to View\)](#)Quote:I'M THE BEST PROGRAMMER ON THESE FORUMS.

to something along the lines of Quote:I'M THE WORST PROGRAMMER ON THESE FORUMS.

Oh wait, maybe Quote:I'M THE BIGGEST SKID ON THESE FORUMS.

would work as well! (^ Reducing Height of Post)

Eternal Darkness - October 26, 2014, 1:58 pm

Good points Nikey646... I like that you know what your talking about. Its not the timer/thread (particularly) it is using the features built into the classes to your advantage... :)

[He literally states that this is a re-release of "Steam Spammer by Spy"](#) (Edit, the skid has since removed said thread... Proof [here](#))...

You really think your the best coder here kid? Prove it. Make something somewhat good, without copy and pasting from someone else's source, and without making programmers her fix the problems/code it for you. Until you release a worthwhile application, or prove that you know the slightest bit about programming you will not be seen as a programmer... Until then, you can call yourself the "best programmer here" but I haven't seen a worthwhile project from you... So your hardly a programmer, yet alone the "greatest programmer here"... To put it simply, I do not believe that anyone on this board will believe you are the "greatest programmer on the forum" if all you do is steal (put your name) on others sources/projects... xD

If I do the same to your projects am I the best programmer on this forum? I can put my name all over your projects and re-release them if you want. Then finally I can obtain the true "greatest coderz of teh HFz awardz"!!! :))

This does not change the fact that I am amazed you have not been banned yet, as you are in violation of a major rule in creating multiple accounts... I am fairly certain that this is not your first time in doing so, and can assume it will not be your last unless you are IP Banned... The staff really should step in to prevent you from ripping off others bots and re-branding them as your own... You have admitted to re-purposing 2 "sources you found" and putting your name on them in a foolish attempt to get e-pointz... Just leave skid... You aint getting nothing for that shit... >.>

I can't delete threads I'm a regular user...

I created it based off how that spammer use to work, entering every line so you can spam ASCII and spam really fast.

(Oct 26, 2014 12:17 PM)Nikey646 Wrote: [CITE](#) That'll only work with Mechanical Keyboards. If you use a membrane keyboard, it won't continuously send the KeyPress, and will only result in it being sent once.
