Thread: [\[Free\]CppSqlInjector v1.6 beta | Fastest Blind Sqli Tool | C++ | Windows and Linux](#)

dotcppfile5 - October 27, 2014, 10:01 am

Old Thread: <https://hackforums.net/showthread.php?tid=4216238>

Introduction:

CppSqlInjector is a Sql Injection tool programmed by dotcppfile in C++. It uses the Blind Boolean Based Sql Injection Method.

It's available on Windows and Linux.

It is the Fastest Blind Sqli Tool out there. CppSqlInjector works on any vulnerable link no matter how hard injecting it looks like.

This tool extract everything from any database found on the website.

CppSqlInjector gets frequently updated and upgraded and it's Completely Free so Do not hesitate to try it out!

Features:

Programmed in C++ so it works on all Windows platforms.

Uses 3 different blind Sql Injection methods.

Supports MySql V5 and PostgreSQL Databases.

Supports Different Type of Injections such as String/Parentheses etc...

There's a version for Windows and a version for Linux (Completely the Same when it comes to Features and Performance).

Uses BitShifting which makes it Pretty Fast.

One of the fastest tools out there.

Can dump everything.

Can dump specific data requested by the User.

Can inject in GET and POST requests.

Can Read Files in MySql.

Can Find and Read Log Files in PostgreSQL.

Can Read Config File in PostgreSQL.

Has an Automatic WAF bypassing System.

Has an Automatic MultiThreading System.

Supports TOR.

Supports Specific Parameter injection.

Can Search for a Specific String while Comparing Pages.

Can Follow Page Redirection.

Can use a Mobile's User Agent

Can Remove and Add the MySql Comments at the end of every query.

Has a Log Recorder.

Has an Automatic Version Checker. (makes sure you're using the newest version)

Gets Frequently Updated

Completely Free!

Pictures:

Spoiler ([Click to View](#))

It's also available on Linux but no picture for that Lol.

Better use Havij, much more well-known and seems more legit.

The only thing is that when it comes to Boolean Based Blind Sql Injection, CppSqlInjector pisses on Havij Lol.

iHacker-n00b - October 27, 2014, 10:59 am

Awesome one bro! ?

lol When it Fails SQLMAP What is Havij in Front of it then!

D4T4B4S3 - October 27, 2014, 11:09 am

This is so great for bool based blind sql :) Thanks!

dotcppfile5 - October 28, 2014, 9:23 am

Thank all for posting, your support is much appreciated.

tendercareastin - October 28, 2014, 9:51 am

Does it exploit "https" protocol cos I observe Havij does not have that feature enabled.

Yes it does work on anything perfectly.

sunip99 - December 13, 2018, 5:40 am

anyone has tthis ?please reupload
