Thread: [.htaccess - how to proxy all .exe files in a dir?](#)

'An0ny - October 27, 2014, 4:42 pm

how could i proxy all .exe files?

example:

i visit <http://domain.com/file/randomstring.exe>

it will proxy the file <http://domain.com/file/1.exe>

any way of doing this with htaccess..?

Zasto - October 27, 2014, 4:45 pm

<http://corz.org/server/tricks/htaccess.php> take a read of this it should help you.

I can use google myself, thanks.

Haven't found any with the exact thing I am wanting. I am not too good with htaccess lol

Hello An0ny,

I believe the mod_rewrite module is what you are looking for. For documentation take a look here:

<http://httpd.apache.org/docs/trunk/rewrite/remapping.html>

Code RewriteEngine on

RewriteRule ^/foo\.html\$ /bar.html [PT]

So in your case:

Code RewriteEngine on

RewriteRule ^/randsomstring\.exe\$ /1.exe [PT]

You can also use regex to match the file name. For example

Code RewriteEngine on

RewriteRule ^/.*\.exe\$ /1.exe [PT]

Should match {anything}.exe and point it towards 1.exe

Hope this helped.

Kind regards

It isn't possible to count the number of files, which I assume is what you want (1,2,3,4,etc.).

Squito - October 28, 2014, 7:29 am

.htaccess:

Code RewriteEngine on

RewriteCond %{REQUEST_FILENAME} !-f

RewriteRule ^(.*)\.exe\$ file.php?file=\$1 [NC,L]

file.php:

PHP Code

<?PHP

header("Content-type: application/octet-stream");

if(isset(\$_GET['file']))

{

if(\$_GET['file']=="xyz")

{

readfile("abc.exe");

}

}

?>Put the .htaccess and the file.php into the directory where you keep the exe files and it will work.
