Thread: - [WordGenerator - Create powerful wordlists in a matter of second! \[Open-Source: C++\]](#)

Niely - October 30, 2014, 7:20 am

[img]<http://i.minus.com/iTiX1ZOwhIJt5.png>[/img]

Version: 1.0 Beta

WordGenerator is a free tool for Linux and Windows to generate word-lists/password-lists in only a matter of seconds.

You can have the best cracking tool, but without a powerful wordlist you're stuck.

- Features -

Generate words fast [+]

Loads of options (Character amount, Upper-cases, Characters, Letters,...) [+]

Easy User-Interface [+]

Extracting words from Websites & Documents [+]

Support [+]

Updates [+]

LOADS MORE [+]

- Video -

[Video: <http://youtu.be/pE-gADho9VA>]

720hdd & Full-Screen for quality

In this video I created a word-list with 50000 words, in a few (5-6) seconds with my average PC of 4GB RAM.

As showed there's still a small problem with extracting words out of documents to get real words.

- About -

WordGenerator is made in two powerful programming languages, C++ and Python.

C++ for the interface and biggest part of the engine, Python is used to extract words out of documents. Python takes the source code of a website, and filters the text out of it. Then a C++ engine will take it over again to list the words under each-other.

WordGenerator is compatible with Linux and Windows. However, Windows will get less updates, less options,... as Linux.

- ToDo List -

[-] Fixing bad displays in User-Interface

[-] Fixing extract-from-document-engine bug

- [-] Adding more options (asking for Upper-case etc)
- [-] Adding optimize wordlist option (taking out doubles etc)
- [-] Option 4 (Extracting text), will be updated & fixed extremely hard.

- Changelog -

- Download -

This is just the Beta version to check option 3, grammar and the source-code, more updates, options, and bug-fixes coming soon!

- Terms of Use -

- Every distribution of this software must include the original credits
- Source code may not be distributed separated from the software
- Suggestions/bugs related to the source code must be handled through PM,
Suggestions related to the application may be discussed in this thread

- MagicList -

I've once made a 6.1GB, 300Million+ WordList with this tool (Also real words, not only random characters).

You can soon download it in different parts.

Other projects:

[ClamAV-Easy](#)

Thanks for reading,

Niely

havikryan - October 30, 2014, 9:21 am

Wicked job mate. I like it. I once made something like such, but with only batch.

Unfortunately, mine was MUCH slower generating than yours.

Might i suggest more functions? Perhaps letters, or numbers to exclude?
or a true/false option to generate real words?

Good luck! :D

Niely - October 30, 2014, 3:02 pm

^Yeah, indeed.

That you for example include chiffres, but not 1 for example. I've added that on my list. :)

The real words are option 4, but that option still needs a lot of work.

nondescriptoldie - November 1, 2014, 7:11 am

Very nice tool OP! I really like what you have started working on.

Good luck!

Moon Rock - November 1, 2014, 11:44 am

Looks great, haven't tried it yet. but I like how you can scrape the text from websites ?

P?Nq - November 1, 2014, 11:48 am

The link is offline for the download. And not just that I still can't get what this is mainly about...

Moon Rock - November 1, 2014, 11:52 am

(Nov 1, 2014 11:48 AM)XNets Wrote: [\[CITE\]](#) The link is offline for the download. And not just that I still can't get what this is mainly about...

Works just fine for me, might just be you.

webdev77 - November 1, 2014, 11:55 am

I also cannot load the download page. I bookmarked this thread and will be back here to check it out. Looks very useful.

One?? - November 1, 2014, 12:04 pm

Worked for me, thanks for the share man!

Moon Rock - November 2, 2014, 1:02 am

Sad to say, but I can't extract the windows folder. Can you please fix this op, thanks ?

Niely - November 2, 2014, 4:04 am

Thanks for the nice reactions all! :)

"The download page is down for me."

If my site was down (404/503/...), I'm sorry.

That's something I can't control.

If you mean that you just can't visit the download page, you have to make sure you've got history enabled.

The site works with a special security system, that the index page is the only way to get to the download.

<http://142536789.tk> > Log-in > Download.

With History enabled.

But I shall try to edit the security system a bit to make it more flexible.

"I can't extract the Windows folder."

You mean the Windows source-code? I don't encounter any problems there.

It's a .rar file you need to open. The password is mentioned in the OP.

If you can't open RAR-files, you maybe want to look at a tool called WinRAR.
<http://www.rarlab.com/download.htm>

I'm also trying different things to get option '4' to work better, and extract more text.
Text file Analyser will come later. :)

Gizmo - November 2, 2014, 4:06 am

This is an awesome tool. Thanks for the share.

Niely - November 2, 2014, 9:13 am

^Thanks a lot for your nice reaction! :)

I've already fixed one part of the problem with option 4, I think I've to let the application craft the source code itself to text for a part.

Moon Rock - November 2, 2014, 9:43 am

Alright, got the download to work now. I'll have to test it once I get back from work, thanks for the sharing ?

Hokage - November 2, 2014, 10:06 am

you can also look 1337 hackerness while doing it!

Niely - November 2, 2014, 10:29 am

^What do you mean?
Page isn't found.

(Nov 2, 2014 10:43 AM)Hitman Agency Wrote: [\[CITE\]](#) Alright, got the download to work now. I'll have to test it once I get back from work, thanks for the sharing ?
No problem, hope you like it. :)
Mention it's only the first beta version and option 4 is really buggy.

nuk - November 3, 2014, 7:25 am

This looks promising... thanks for the share :)

Niely - November 3, 2014, 9:26 am

^No problem! :)
Of course this is just the beta version.

Niely - November 5, 2014, 10:32 am

Hi

My website was down due a problem in the DNS. I was forced to create a new website:
<http://142536789.cf>

ClamAV-Easy, WordGenerator and other tools can be downloaded again! :)

polishking50 - November 5, 2014, 3:39 pm

I can't open the page says problem with connection.
Can you put up another link?

Niely - November 6, 2014, 7:31 am

^That's odd, the page just works fine for me.

Make sure you're using the new website.

<http://142536789.cf/>

4h35i13n46u7 - November 6, 2014, 10:21 am

Finally a worth download tool :P This will help. Thanx! :)

polishking50 - November 6, 2014, 3:47 pm

(Nov 6, 2014 08:31 AM)?Niely Wrote: [\[CITE\]](#) ^That's odd, the page just works fine for me.

Make sure you're using the new website.

<http://142536789.cf/>Yah I'm using the new link. It says "This page can't be displayed".?

Edit: I tried using the fix connection problems button and says the DNS server isn't responding.

Niely - November 7, 2014, 12:21 pm

^Do you have this on other websites/browsers too?

Try to follow this tutorial (method 2):

<http://www.wikihow.com/Fix-DNS-Server-Not-Responding-Problem>

(Nov 6, 2014 11:21 AM)4h35i13n46u7 Wrote: [\[CITE\]](#) Finally a worth download tool :P This will help. Thanx! :)

Thanks for the nice reaction! :)

I by the way also found the second problem for option '4', that one wasn't an issue on the application's side; but still can be fixed.

Steampunks - November 7, 2014, 6:34 pm

Thanks for sharing this very useful

Niely - November 8, 2014, 4:39 am

^Thanks a lot for the nice reaction! :)

Make sure to stay tuned because the next version will be released soon.

nepHaXOr - September 19, 2015, 7:17 am

Server not found

Iceweasel can't find the server at 142536789.cf.

Check the address for typing errors such as ww.example.com instead of www.example.com

If you are unable to load any pages, check your computer's network connection.

If your computer or network is protected by a firewall or proxy, make sure that Iceweasel is permitted to access the Web.

Lightstalker - September 20, 2015, 10:23 am

Nice job, this could be useful in the future for me, thanks. :)

help4u - July 1, 2018, 3:35 am

CAN any post a working link for this?????
