Thread: [\[Freeware\] TorrentPlay 1.5 - Stream Torrent Files \[Created By Mace\]](#)

TorrentPlay allows you to stream torrents, as if you already had downloaded a movie or tv episode.

Guide: Open TorrentPlay -> click the traymenu -> click "Find Movies & series -> copy the torrent link (magnet) -> TorrentPlay will say it has detected a new torrent -> Choose your options -> click play.

Questions:

Do I need any video player? : Yes, there's no players built into TorrentPlay, download and install you preferred player, before using TorrentPlay.

Can I stream any movie & tv series? Yes, as long as there's enough seeders.

What is the easiest way to add subtitles? Go to subscene.com, and download the zip file, and drag-n-drop the zip on TorrentPlay.
(It will find the subtitles inside the zip file itself)

Does it support chromecast? choose the "download option" and the "Save the video" option, then stream the file to chromecast using this plugin:
"Videostream for Google Chromecast™" (Find it on the chrome extension store).

Does it support apple tv? Yes, use the "airplay" option.

King of Clubs - November 1, 2014, 4:37 am

Seems interesting. Is this a software that runs on a server that you have to maintain or is it all client sided ?

Great. Everything seems to work so far.

Malware Bytes detected something about the node.exe. Is that something you can explain?

I also made 3 scans on my computer and nothing was found!

Other than that it's works like a charm. So vouch I guess ?

The reason I choosed vlc player is because it supports out-of-the-box all the known video/audio formats, and it's size is not to big

? you know streaming uses the exact same amount of bandwidth, right? ?

What is the difference in using this over uTorrent, or any other torrent program?

It's a lot more reliable than utorrents streaming option, and tstreamer support vlc, airplay, and sort of Chromecast, utorrent dosent't.

It supports subtitles as well, and it monitors the clipboard for torrent links, for streaming movies / tv episodes, it's a lot better than utorrents option.

For simply downloading torrents, utorrent is to prefer, but not for streaming.

Very usefull software, I love it :)

Thanks Mace

Mace - November 2, 2014, 8:53 am

I made a change to TStreamer, before it wasn't able to stream all torrent links, now it is.

If you downloaded TStreamer before I posted this message, re-download it again, to get the fixed version.

(Before you run it, delete this folder: %userprofile%\TStreamer\)

TStreamer 1.1 has been released.

Changes to the core engine, and some GUI fixes.

If you have used TStreamer before, remember to delete this folder before running the new update:
%userprofile%\TStreamer.
Else you will still be using 1.0.

really nice work, i just got done watching the purge 2 on it and it worked extremely better than i thought it would, i expected it to be choppy or buffer every 5 seconds but it was just like if i downloaded it except i only had to wait about 30 seconds instead of 35 minutes to watch a 3.26 GB movie

a few suggestions would be a hard close option so it closes instead of minimizes and double clicking the tray icon opens it

I made the X minimize the application,
because many will click it, expecting it to go to the tray menu, if you right click the tray menu, you can click exit.

about clicking on the tray many, I just made it so when you left click the traymenu, the gui will appear, and if you right click, you will get the tray menu.

thanks for your suggestions,

A update for that will be released soon.

No, I didn't do a lot, I made a nice gui for it, that got some nice and easy functionality, like link grabbing, and made node & vlc portable as well, and organized it. Simply for making it a lot easier to use, more user friendly.

I was ready to write "This is something like popcorn corerct?" but you mentioned , so i will spit out my questions..

- 1) Supports bsb player or kms?
- 2) At this program you choose every torrent you want and you just "play" it, in popcorn time you dont have this option cause you need to wait for the admins to upload the movies.. am i wrong?

Hi Akzius, I'm glad you like my old project TStreamer.

It's been a long time ago since it had an update, I will update it one of the next upcoming days.

Here's what to look forward to:

- back to old dark gui
- newer version of it's internal command tool (nodejs)
- newer version of the peerflix engine.
- improved startup function
- fixing the minimize option
- firewall exception for nodejs (first time run)
- check whenever the different players are installed or not, ex. vlcplayer.
- new name: TorrentPlay

small changes, but good improvements ;)

Awesome! Glad you've decided to continue working on this software.

I've been using it ever since I joined HF, and it's one of my favorite software here.

You should add a web-viewer where users could view sites like kickass.to, etc and select a movie to watch.

(For convenience)

Mace - February 17, 2016, 10:31 am

The new version is ready.

Here's the changelog:

changes:

- Updated peerflix engine
- Updated notejs engine.

- back to old dark gui
- fixed minimize function.
- added a new site: torrentz (torrent search engine) to the tray menu
- re-named to : TorrentPlay
- IMDb added to traymenu

Armada - February 17, 2016, 10:51 am

Is this similar to using the "Play file/Media" option in utorrent, but specially for streaming?

A lot of new torrents still come as rar splits, can it deal with that type of download as well, or do they need to be a straight media file?

Nice release man, surprised I had not seen this around here yet. Thanks.

Mace - February 17, 2016, 11:04 am

Yes, besides utorrent is quite unstable. TorrentPlay is more stable.

It can't deal with rar splits, but there's links in the tray menu, that contains a huge amount of movies that aren't rar splits (and series) here: <https://torrentbutler.eu>.

Glad you like it :)
