Thread: [USB Stick 8GB Crusor Problem](#)

GreenD - November 1, 2014, 2:28 pm

Hello, This does not read my computer and i need this to work, when i plug it into the computer the chip on the board goes warm but it can't read my files.

The files that are on this usb are important is it possible to recover back?

Wrong section.

OT: do you have the proper drivers installed for the device? Try another USB port, like one thats on your motherboard I/O panel

Krew - November 1, 2014, 2:32 pm

Chip seems to be damaged from the pictures. Did it not have a casing?

Try downloading Recuva
It might be able to recover files.

Sorry if i have posted into the wrong section.

Like 4 week's ago it used to work but now i have got a new PC and put in the USB 3.0 few times and now it doesn't work i don't have a clue why maybe it didn't support 3.0 even though it worked few times.

Also i have tested this on my other computer and didn't work.

Yes it did have a casing, which i removed it securely and didn't damage it physically.
