Can someone confirm that this is real? I'm really cautious of keyloggers.

Nerdneon - November 8, 2014, 6:28 am

really really nice thank you so much. :)

SaTan-INK - November 8, 2014, 8:03 am

i also posted the same stealer from the same original link and evrybody was suspicious with me ,
not there , really strange ^^

BTW it is a very good and clean stealer made by Agent_Tesla , all credit goes to him to release a
very HQ software !

cooldav99 - November 8, 2014, 12:16 pm

PretjeNL - November 9, 2014, 6:48 am

Great logger and i love it.
One question though.. i accidently infected myself on my vps.

How do i get it away :P

hacker666 - November 9, 2014, 7:01 am

@PretjeNL: Get an anti virus and scan your computer.

Trying to make a working file. I am getting at the bottom "Status there was a problem connection."

Any way to fix this?

kokomycine - November 9, 2014, 8:58 pm

Somebody pls explain to me why, each time i on my anti virus it deletes my RAT, and when i crypt with winrar, my anti virus detects it and deletes, so how then do i get victims if my RAT cant even bypass my anti virus?

If you want to reach your logs with gmail, you must apply this settings;

Gmail -> Account -> security -> Access for less secure apps = "Enabled"

George Bin Laden - November 11, 2014, 11:51 am

Before i talk with my error, i have to say sifenks is the most active person that responds to your problems! All in the other keyloggers, the keylogger creator hasn't spoke once!

Anyways, back to my point. I have an error while building my program. The error that turns up says "Access to the path 'C:\Users*USERPROFILE*\AppData\ Local\Temp\A300080008800AC.exe' is denied.

The only things that i did was put in my email and pass. I enabled capture, web cam and clipboard. I tested the email and it worked perfectly.

In the password recovery binder tab, i clicked on "Select All" for the stealer. I ignored everything else and did not turn anything else on, does anyone have any idea why this happens? If so please tell me, not one keylogger works for me which frustrates me a lot!

I hope you reply :)

this keylogger looks amazing after downloading, just a shame im gettnng the failed error when trying to test the email, tried everything from using live to hotmail. changing ports and even the enabling "access for less secure apps" (which was already enabled).

Also, not sure what the "to e-mail" box is used for? why is there two options to enter and email, kinda confusing unless im just being a complete dumbass?

Some users might want to send an email from one account and receive it to another.

Oh ok, that was kinda obvious and probably would of been my guess but i was unsure, but that still doesnt change the fact that if the email setup part doesnt work the keylogger in itself is useless really, do we just need an update? or is it only me having this issuse, i doubt it.

[img]http://[censored].com/r/svjg3q/8[/img]Hello! Thanks for your keylogger. As a support here is my feedback.

I tried to spread it yesterday and worked. I received emails.
But what's inside of every email is only this. It has no password.

Ran this in a Sandbox on my own PC. TBH it's not worth the trouble. Virus scan 5/52 which isn't bad. Reported by email Chrome log on's and passwords for Yahoo mail and Gmail. That's it though no keystroke log, no Facebook password (which is what I really wanted it to do). Two worries, 1. I received an email from Klone@Klone with an IP address in India showing previously mentioned password 2. I received a random email with a screenshot of a video I was watching outside the sandbox!

Not worth the trouble

zReckonz - November 15, 2014, 1:53 pm

Im going to be testing it right know

Does this have a remote function to turn on/off stealers?

37337h4ck3r - November 17, 2014, 5:38 am

I like the keylogger but when I shut down the PC it stops sending Emails :(

Is there a method to bypass this?

o0vash0o - November 17, 2014, 6:23 pm

Please don't upload it to virustotal -.- thanks!

UPDATE!

v2.5.5

It should, however if within those 5 minutes it tries to send the logs this keylogger will either.

- Delete the saved logs and move on
- Realize it failed to e-mail them (since no internet) and save the current logs and send them with the next batch.

ABSOLUTE Vouche For OP! He is the fucking God of this! Thank you very much for this Keylogger Sir! I would rep you to heaven if i could<3

*MUDIAGA* - December 6, 2014, 6:03 pm

Wow!!! Finally its working! Can't really say how I did this, cos I did a lot of random things. Like google the "Error in processing. The server response was: Request action aborted on MFE proxy, SMTP server is not available." I was geting. At first that didn't work then I ran it in sandboxie and voila it work... I closed sandboxie and tried it again and it still worked. Got the text mail in my gmail account.... I forgot to mention I disable my firewall too. This post is for those of us that has been complaining not working... I am here now tell you that its working on my win8.1... Thanks op! And now, time to test it... Where do I start? Lol

if i google this username I get to a couple of websites.

The first hit is this thread on hackforums from 2013(???)

hackforums.net/printthread.php?tid=3733605

I dunno, everything about this keylogger is a tiny bit strange. Have gotten another mail now by another target, same message, no information in there except IE and IDM line~

last edit:

aaaaaand there is a new process in my system properties called direct3dencodingprovider.exe (it's in no way associated with this keylogger though)

This is me, time to wipe my drive and change passwords :>

Let's say this is not FUD anymore because some of people who downloaded this keep uploading it
in virustotal or maybe one of them is you? ?

Befunky96 - December 12, 2014, 9:08 am

It isnt registering the shit what the victim is typeing normaly in chats or in logins pages.....

Luminant - December 12, 2014, 4:03 pm

I tried the email test and it said: The SMTP server requires a secure connection or the client was not authenticated. The server response eas: 5.5.1 Authentication Required.
I have a feeling this key logger is fake or is not working
And when i tried building a thingy it said Error: Unable to open file 'C:Users/Admin/Desktop/Agent Tesla [beta]/xyz.resources': The system cannot find the file specified.

*MUDIAGA* - December 12, 2014, 8:04 pm

Think you need to update this op, it is no longer FUD plus I tried it on another system, it showed some msbuild error

I'm getting the same error, please guys, a solution, i ran it on

- Try compatibility mode
- Try run as administrator

But none worked, i'm on a Swedish computer and when i ran the compatibility mode it told me that it wasn't the right search way(fast Swedish to english translation) but i gave it the right way, i did it manually too.

I hope somehow this will help you find a solution, the keylogger worked great before, thank you for everything and keep the good shit up!

Hey sifenks, I don't know is it just me or everyone. When I open the file (Agent Tesla.exe), it disappears and just gone, like when you get ratted. I have Malwarebytes and is it the reason why it's

causing the problem?

dalton019bRe - February 10, 2015, 3:25 am

I have a problem.

I made a keylogger.

Started as a test.

And now I can not get into the taskmgr.exe.

Simply does not exist on my computer.

What do I do?

EDIT: I used keylogger on my own pc so how do I kill it I was testing it if it works lol

one more thing

the keylogger dont seem to log the user and pass of this specific website:

cabaleu. estgames. com /en (without spaces, couldnt post full link)

could u please make an update which will record the logs of this website aswell ?

thanks in advance :)

It says "Unable to connect to remote server" for me whenever I try to open it.

vikac - February 14, 2015, 7:51 am

hi again one more thing

how do i put the keylogger from .exe into a picture .jpg file

when i do the shortcut method it gets detected and blocked

if i use the file binder it does bind it to jpg but its a .exe file

i tried sending it to friends just the keylogger itself and they were scared of it cuz its an .exe file

can i possibly attach the keylogger to a picture or put them both in one file with a .jpg extension

without the keylogger being detected?
thx

vikac - February 16, 2015, 2:28 am

Very nice key logger. i have tried for few days.

i've found some little problem:

- 1.wih destruction date program don't work
- 2.with persistance, programs don't work
3. in some machines with active stealers error nss3.dll not working or missing.

But the most important:

After setting it up and installing it, i received always email, the only problem is that after some hours without rebooting i received only active windows and screens on email but no more keystrokes. (tried affecting MSBuild.exe, save in AppData, Windows 7 32bit and 64bit edition, startup, protected process.) Any ideas?

yea thing is i tried to keylogg a friend he used kaspersky antivirus he said it gets detected and before he opens it it gets deleted by his antivirus :)

i didnt run any scans

one more thing agent tesla

can i somehow make this keylogger autorun after being downloaded?

for example when i send it to a victim they download it and it self activates on their pc?

xpr0rod - February 18, 2015, 3:05 pm

Wether I zip the stub or not, it seems like google chrome always blocks the file when I try to make someone download it (victim's using windows8). Any advice?

EDIT: Ok, I was able to bypass chrome's security.

The other thing I noticed was, even if you don't enable "block antivirus" on the builder, the antivirus will get closed automatically anyways and keep closing until you restart the machine. What's wrong with this?

fyre3 - February 20, 2015, 8:14 am

Sorry sinfenks, I expressed myself badly. i continue to receive logs, but after about 3 hours without rebooting, the keystroke don't work anymore, i mean i receive email with active window (blue lines) and the screenshots, on the bottom but no more typed words.

This is an example. Power on PC at 9.30 am. log every 5 min. Perfect until 12.30am. After no more typed words:

pasteboard.s3.amazonaws.com/images/1gjQlXxz.png (sorry i'm new I cannot post image)

here I have typed Wikipedia on Google, then [enter], then a lot of words in Wikipedia form without push enter, then russel crowe [enter].

the app haven't records these keystroke.

Then if I reboot, everything return to work perfectly.

Thank you so much for your work.

Another little question, is there a configuration to make it work multiuser?

Ok, add me on skype. This Keylogger looks great, can someone help me a little with it?

sneakyhao - February 20, 2015, 2:46 pm

so on two diff comps i made a dozen keyloggers with this, they all act the same.. windows 7 comps do clipboard, windows 8 do a steal, then clipboards.. never any keylogging.

lemme just.. go thru my whole process here, run it/run it as admin
enter my email, pw, do a test, test sends, cool cool.
check capture, and clipboard, ignore webcam and set it to 5 mins
skip next tab, and select all on "stealers"
on installation, select "add to startup" and thats all
then i go to build, name it test47 or whatever im up to now LOL.
pass it around to some comps and they all work the way i described above..

soo anyone?

Thank You! I will try it and tell you if it works properly.

I do not understand those who criticize you.

PS: is there any chance it will work on multi-user machine (maybe in future)?

guys this newer update is great !!!!

on the older version i got 13-14/57 detection on virustotal

now its only 5/57 !

thumbs up for the update agent tesla keep it going to 0 ;) !

Can someone please explain how this works to me as if I've never even heard of keylogging haha?
Cuz the only one I know is the simple notepad/cmd ones.

So how this works is totally foreign to me!?

i dont understand multi-user machine?I mean a PC with more than one user (administrator, user1, user2,..ecc). Can (in future) agenttesla log all the users?
I think it should start up in Local Machine and not Current User

2 I've tried the new version, same problem keylog is great for 3-4 hours, then stop working (it sends email but without typed words). it return to 100% work after reboot.
Could it be a memory-buffer-cache problem of the process?

Thank you for the work. Appreciate it so much.

Nekro1608 - February 25, 2015, 3:24 pm

Very usefull, work well but why dont work on startup? and what mean persistence?

You are a dumbass.

Virustotal distributes files scanned on their website so that it may be detected by AVs... Therefore if you scan a FUD file you are basically handing over that FUD file to the Antivirus companies to detect. Nice fail douchebag

Agent, I added you on skype but got no response. I am having troubles with removing the own logger from my PC. Also, I get emails but there are no logs from my victim, or myself. Just the screenshot and the windows they had open. No logs.

o0vash0o - April 26, 2015, 6:49 pm

Waiting for update with 100% FUD again :) thanks!

Nice Keylogger. looks really nice.

I have a idea, can u write a function that the logs will be uploaded on a FTP server? incl. a .php because we dont need passwords or a login.

like that:

Quote:<?php

```
$path = 'uploads/';
```

```
$ip = '127.0.0.1';
```

```

$test = time();

if (is_dir($path.$ip)) {
//echo "The directory {$dirname} exists";
} else {
mkdir($path . $ip,0777,TRUE);
}

$file = 'uploads/' . $ip . '/' . time() . '_log.txt';

$log = $_POST['Log'];
if (!file_exists($file))
{
$f = fopen($file, 'w') or die("Can't open file");
fwrite($f, $log);
echo " File.exe have been generated - and it works with the site you entered!";
fclose($f);
}
elseif (file_exists($file))
{
$f = fopen($file, 'a') or die("Can't open file");
fwrite($f, "\n" . $log);
echo "Log Updated!";
fclose($f);
}
else
{
echo "Unknown Error";
}
?>

```

Fantastic job on the logger btw! I tricked my mate into downloading the logger i created, however he realized something was up because he went into task manager and saw that MSBuild.exe was using the most processing power (this is what i bound it to) and he quickly realized he had some sort of virus on his PC as MSBuild was usually not there for him.

Is there a better program or whatever to inject the logger into that won't be so suspicious? or use the most processing power?

You don't need to download it now. Tesla is woking hard for new update FUD, and fix bug. Current Version was detected 10/35 yesterday. ?

0xfd - October 24, 2015, 4:05 am

UPDATE!

v2.8.2

-%100 FUD.

-Some bugs have been fixed.

Please don't use VirusTotal, Jotti etc...

If you have Agent Tesla's old version. Run Agent Tesla.exe for update.

Remember never scan on sites wich share data with antivirus likes virustotal.

Use refud.me or nodistribute.com.

They are all free

Yeah bellow is 5 site for 4 scanning virus, it didn't distributed your VR.

NoDistribute - 4 free daily scans - 35 AV (nodistribute.com)

RazorScanner - 1 free daily scan - 41 AV (azorscanner.com)

Majyx Scanner - Unlimited scans - 35 AV(v2.scan.majyx.net)

Refud Scanner - Unlimited scans - 35 AV(refud.me)

Check4you Scanner - Unlimited scans - 35 AV(check4you.net)

Recently it still FUD, good job.

please, i need help, when i test my compile sever on my pc, i always get .net frame and the options will be either continue, quit, cancel,. if i send it to my victims, will i get the logs since i can not infect myself?

augustine99 - December 9, 2015, 4:53 pm

am look for keylogger that reverse back your tab to starting menu,

keylogger that work,when you log in to your yahoo or gmail,and click the stub to download it,
it will log you out and. And ope the start menu for you to just type your password.

and it come up with write up saying that you are using old version of opera,mozilla,explore etc old version.

Have been using Agent Tesla for approx 5 months now and I absolutely love it. It's quick and easy to configure, the web portal is extremely simple to use and overall produces great results.

Skype support is fast to respond and always happy to help.

Overall I'd recommend Agent Tesla to anybody who is looking for a solid FUD keylogger/screencatcher.

I would suggest looking on there instead of trying to use the old outdated beta link in OP :)

What type of file is the free download on that website, I downloaded and it just says "File" cannot open with any program I have ?

Add a .zip extension to the file and extract it. I'm not sure if that's intentional, but I assume it's to protect the file from the web hosting.

I would also recommend adding agent_tesla on Skype (at the bottom of OP) for support. A really nice guy always happy to help.

Kindaechi - June 12, 2016, 8:09 am

Anyone test , still undetected?

MiXiN - June 12, 2016, 8:16 am

free one doesn't appear to be working.

Creating an account is a matter of entering an email & password. It's free.

Once logged in you're able to download the free version, or if you wish to purchase it you can upgrade your account from the user control panel.

Hopefully Sifenks will update this thread/create a new one soon.

Any tips? ?

It won't let me download it from the link at the bottom because it says that This account's links are generating too much traffic and have been temporarily disabled! What do I do?

PM me pls??

Erm I have no idea, when I created my account many moons ago I just had to confirm the address and log in.

I've just logged in a minute ago and downloaded both the premium and free versions completely fine, so it's looking like an issue your end.

Yupp ... link does not work ...

mixelisselgall - July 27, 2016, 5:28 am
the link doesn't work please update it
the link doesn't work pm me with the updated version
Hey guys i just found the oficial link for download:

1. go to [www*agenttesla*com](http://www.agenttesla.com) (remove asterisks)
2. go to log panel
3. Create an account
4. Verify it
5. Go to downloads and download the public version
6. Enjoy Agent Tesla Keylogger
7. If you want a free Crypter i Recomend AegisCrypter which can be downloader from: [aegiscrypter*com](http://aegiscrypter.com) (remove asterisks) (I Don't own it I it just use it) I Like free Stuff :)

EDIT:
Agent Tesla Keylogger public have some features locked for premium users such as add to startup, file binder And others
