Thread: [How to make moving bobblehead gif?](#)

SIM-1851842 - November 4, 2014, 10:35 pm

I recently saw this picture and I was wondering how it was created. Thanks! ?

Dabby Duck - November 7, 2014, 12:09 am

Import the original gif into photoshop

Import the photo of the person you want over the original gif

Use the quick selection tool to select the head, ctrl+c then ctrl+v

Hide the layer you got the head from

use the timeline tool to change the frames to an animation

Select the first frame and move the head layer over the other head on the original gif, do this for each frame

file>save for web

Can I do this in GIMP or any free software or does it have to be Adobe PS?

There are alternative ways to get PS

It's just that I have a Dell Inspiron 15R and I feel like PS makes my comp slower.

Yeah sorry I don't know much about GIMP. if you have something specific you want done like this you can pm me the 2 images and ill do it for you if you would like

GenericSkid - November 9, 2014, 11:20 am

OP, would this help you? http://www.gimp.org/tutorials/Simple_Animations/

The final output looks like this: http://www.gimp.org/tutorials/Simple_Animations/easyanim.gif
