? Death Disturbance ? - November 7, 2014, 3:54 pm

Well, share your stories of grieving or the grieving section, make sure they're interesting and not some "I hacked fagcraft" because we all know the security is impossible to breach.

but go ahead ladies, post your shit.

If you're interested in making extra money feel free to hop on servers and impersonate me, the owners will shit themselves and give you money for you not to grief them because I'm a legend.

PeregrineX - November 7, 2014, 4:19 pm

There's this server that I play on where, on KitPVP, 50% of the people on hack. Server IP will be down below. Then, this guy named bblewis1o11, sick of all the hackers on the server, said this in public chat:

(Can't post images) "next person who kills me with hacks i swear will get ddosed"

OK then. Go ahead, scrub. This made me laugh, but this made me laugh even harder (I couldn't get a screenshot so I'll just post the summary/approximation) :

"I can get all of your IPs by getting them from my minecraft server. Then I'll post them on a hacking forum."

Ok, two things on this hilarious statement:

1) We don't want to join your shiety server, so you cannot get our IPs. Also, this kid CLEARLY does not know what a VPN is.

And 2) So... your going to post the IPs of hackers that you want hacked/DDoS'd, on a hacking forum.... No, jus-- just no. Do you honestly realize how idiotic you sound?

GenericSkid - November 7, 2014, 5:50 pm

Me and a few friends got a "18 year old weed-smoking server owner" to run ServerEffeciencyEnhancer.exe... He was 11, wasn't wearing a shirt and had so much malware on his PC that we felt bad for him and remotely cleaned his PC.

Then we made pornhub his homepage.

Basically, there was once this server owner who basically was a drug addict and when he got high you could basically make him think anything you wanted if you are as wise and beautiful as I am, either way, this guy gets stoned like every week and so first day I joined a server and I find a guy who is advertising that he wants to build a faction base and so I join his base and he tells me that he is waiting for this owner to get on because he is going to get op, me being the 12 year old scum begs him to convince the owner to give me flying abilities, so., the owner gets on in 3 hours of us building the base and suddenly I see the faction owner flying around and I'm like "awwh das so kul" and I beg the owner to give me flying abilities, instead the guy gives me op, and within a week I work my way up to co owner. then, the server gets reset, and the staff starts to dislike me due to me being the little 12 year old faggot that is power hungry, because I was a power hungry child. eitherway I get banned, then 2 literal years later I come back and I find out the guy is in rehab and he has this random bunch of staff so I ask if any of them has contact with the owner and the co owner said he did, and so I explained that i used to be co owner but due to a horrible missunderstand i was banned and now I am back to reclaim my rank, this guy ponders for a week and then wopty doo Im OP again, and then I buy 40 alts, a friend of mine buys 40 alts, we log all of them in, we op every single one, and we start griefing and unbanning and uninstalling all the plugins (forgot to mention I also got console very easily) blah blah all the basic shit, so they ban our alts and then all of the staff start to accuse me of griefing even the co owner, however, I go to the gullible junky owner and say that my account was hacked by the co owner and that it was not my fault and he is a fraud, how was I going to convince him? photoshop ofcourse. I photoshop a skype conversation of him pondering about hacking my account repeatedly and the owner believes it, bans the co owner along with more of the staff, unbans me assigns me to be co owner again, then I get bored of minecraft grief the server one last time, ddos it repeatedly blah blah blah, the owner was left without any staff and all of the custom heroes plugins coded (they had custom heroes from their coder which I convinced the owner was crashing the server) and stolen by me and all deleted, I came back onto it on an anonymous account and found out that he had to recode all of his heroes

and his playerbase has dropped to maybe 20 a day if they are lucky, I call it a successful grief.

The legend of the queefing section, by plernatious:

Spoiler ([Click to View](#))Chapter One - The Beginning

February 18, 2011 - Beta 1.3 - The Griefing section was just starting to awake into a very wobbly, weak beginning. Hacks were practically non-existent. Everything was wonderful.. Nobody knew anything, so there was no trolling, and no flaming. Transcend is formed. No coders had arrived yet.

Beta 1.7 - Coding army formed. Real coders were coming into this section. But alas, as hacks became existent.... so did the skids.

Chapter Two - Timeline of the Skids

Mid Beta 1.7.3 - The skids are moving in. They seem friendly enough, but they don't know how to simply toggle a boolean, or code anything for that matter. They are using Nexus and Pick-a-Client to destroy servers. They claim to be like aVo and are creating Griefing Teams in hopes of fame. Our last defense is Pitbull client and our private clients.

Beta 1.8 - Every skid and their mother seems intent on "coding" a custom client. Flaming and trolling is becoming more apparent, and threads have dived to an all-time low. However, we did see the birth of a few great clients: Nodus, VCAHax, NetherCraft, and hackforums. The Anti-Skid Army and the Coder Army are formed. The skids outnumber us now and we are losing ground.

Minecraft 1.0 - Tutorials are running rampant, if I should even dare to call them tutorials. YouTube is littered with tutorials that even a beginning coder should know how to do. Skids are starting to take action against us. No great clients have been released, but the four greatest clients of Beta 1.8 are still around. This is when this section starts going downhill very rapidly, and our army can not hold back the skids. We decide to fall back farther into the section.

Minecraft 1.1 - The last update of NetherCraft and hackforums. Skiddy clients are being released, and high quality members are leaving our army. Transcend is in full swing, and will soon merge with BASS-Code.

Minecraft 1.2 - aVo is doing well, but we aren't. We have run out of resources and coders. BASS-Code starts acting like assholes, so we are doomed.

Minecraft 1.2.5 - The Griefing section is the lowest quality section. We're doomed, as the skids take over and clients like Nodus become their primary weapon. aVo is over.

Minecraft 1.3 - The Griefing section is now in a new phase. PVP is the new fad, and clients' auras are evolving into more ferocious, as well as deadly hacks. GUI's also become more apparent. Axiom is the new Reliant, but eventually gets leaked.

Minecraft 1.4 - We are now in a phase where if you don't have a good aura, you're a skid. If you don't have a good GUI, you're a skid. If you use Nodus, you are a skid. Pringles is the new Axiom, and also gets leaked.

The Beginning of the End

The skid army was advancing, and had claimed massive ground in the Griefing section. The rebels, led by General Rza1337, were trapped and outnumbered. Thankfully, in a blink of an eye, Krysk came bursting through the doors with Reliant on a thumbdrive. He chunked it out the window, and like obedient puppies, the skids chased after it. It turned out that thumbdrive was actually a smoke grenade, and the skids were stunned. In the confusion, the rebels escaped out through the skidproof-tutorial section, but left one man behind: Emotional Patrick's dad. The skids were furious, and made him translate the skidproof-tutorials into code dumps.

With this new-found power, the skids skidded off of every tutorial on the internet. Beginning their advance on the rest of the internet, they decided to make Hackforums their capital. The skids, led by Tsar fromatic, had a working auto-banner and were able to ban all the good coders from Hackforums. Within a minute, Omniscient had unbanned them, but he couldn't realow them access into the Griefing section, which was now completely run by skids. Omni gave up on the Griefing section entirely and used the last Ace up his sleeve to stop the skids: a moderator. Dan. joined the Griefing section as the new moderator, and was horrified. He is not a major force in the anti-skid movement as of now.

All the coders were now horrible trolls, brainwashed by the skids, or trapped outside the Griefing section. Would Krysk help us once again, and hopefully destroy the skids once and for all?

The Transcend - POG feud

Transcend owned POG by hacking their website, POG went all madbro. The end.

The Coder Army's Last Stand

Day 1 - The skids are closing in on us like a boa constrictor. Our resources are limited, and good clients that aren't claimed by the skids are private. We have no hope, and pray for a swift death.

Day 2 - We are not so lucky. Sirenfal sits back and laughs at this section's quality, as we try to hide behind "skidproof" tutorials. Sadly, with the skids having kidnapped Emotional Patrick's dad, they are able to decipher the tutorials and turn them into code dumps. As their numbers grow larger and brave members die on the front lines, we are sure to be doomed to a skid-infested, horrible brainwashing.

Day 3 - We were able to manage to code a LLS into one of the clients, and may be able to take over the skids with our vast knowledge of programming languages. Let's hope that this is true.

So why didn't aVo help us?

Well, earlier this year, the skids attempted to take over the Griefing section once and for all. Sirenfal came to our rescue, only to throw a decoy Reliant saved on a USB out the window to draw the skids off us. Little did he know, that when he got home, his computer was stolen! Reliant would be released for every skid in the world! Of course, Sirenfal couldn't let that happen. We only thought that he had abandoned us. Instead, he had saved us from our worst fate.

Sirenfal trekked through the Appalachian Mountains to get from Florida to where intel had reported

the skid went with Reliant. Sirenfal, without his l33t h3x on Reliant, was almost powerless. But, however, he had the element of surprise. Sirenfal burst through the doors, only to find fromatic trying to decompile Reliant in mcp. Sirenfal laughed for an hour straight as fromatic tried to figure out how to fix the errors.. but fromatic called BASS-Code to crack it for him! Sirenfal was stunned to see DrPres burst through the door. Sirenfal scrambled to fromatic's computer, and took back the thumbdrive with Reliant on it. DrPres booted up Prescraft, and Sirenfal booted up Reliant, and they fought each other with their killauras! Sirenfal remembered his mission, however, and didn't risk Reliant being stolen. He used the NC/NC+ bypassed teleport to teleport to the safest place he knew: Shusako's house. He told Shusako, "Hold still!" and proceeded to stuff the thumbdrive up Shusako's asscrack. DrPres found it, and proceeded to freecam into Shusako's ass. DrPres hasn't been found to this day.

The real leader

"NOOOO! GOD DAMN IT, DON'T YOU LEAVE ME NOW!"

He's dead. Damn it, he's dead. Fuck you, iAmDat, fuck you! Why.... WHY! Sergee had tried to stop him, but with iAmDat's aura prioritization in SkidCraft, he didn't stand a chance. There was a gaping hole in his chest, where the heart used to be. McSpams had lagged down the server, but it wasn't enough. He was dead now, and iAmDat was the skid lord.

It had happened one hour earlier, when Sergee, iAmDat and I were sent on a mission to stop Fromatic. We dropped from the shitty wooden shack that was built in the sky, and were to drop in on the faction "xXKewlCidXx"'s base, burn it to the ground, and leave no witnesses. We had our NoFall's on, and landed swiftly. The player was about to complain to the admin, when I yelled to Sergee to turn on the McSpams.

There was a pause, a minute, maybe two long. I heard nothing but static from him, but there was some shit that was happening on iAmDat's mic.

Code "Ok, Ple-"

hears knife stabbing noise

Meanwhile, at the HQ of ButtFuckerIncorporated...

"Ha, 'xXKewlCidXx' don't stand a chance! I swear, ._O, you and me are going to wreck these kids, just watch. They have no fucking idea that I'm just gonna go in like, BAM with my aura and they'll be like, 'ER MAH GAWD HAX0RZ!!!11!'"

"Damn it Booty Hunter, just calm the fuck down. They're right over there!""FUCK YOU iAmDat, FUCK YOU!" Damn it. Too late. He's gone.... but then, who are they? Shit, they must be "xXKewlCidXx" members!"WOOHOO, I'M GONNA FUCKING GET YOU YOU LITTLE KID!" I exclaimed, twirling the sword over my head as I sprinted toward the kid. "YO GON BE SORRY YOU FUCKED WITH US!" Then, ._O decided he just HAD to be better than me, shouting "Yeah, umadgais? You aren't ever gonna get your stuff back again!" Then, shooting a bow right at the fucker's head missing by inches, he drew his sword and ran at the n00by little kid.Hot sweat was clinging to my face now as I ran, and arrows whizzed by me. Well, at least I won't have to worry about shaving. This guy's doing all the work for me, good job or not.
Apocalypse

"Gentlemen, today is a grave day. With the new-found teleport glitch in 1.3, DrPres was able to escape from Shusako's ass. Intel reports that he is amassing the skid army to finally take the source, once and for all. Our mission is to stop them. Enter the next room to begin your briefing."

One month, 23 days, 2 hours later. The skids have been fighting with us fiercely for the Reliant source. Prescraft is killing us all, and even our best clients cannot match the skids ability. They have cracked the very paid clients we use, and have many more people than us. Even our Java drive-by RAT isn't stopping them. The only way we are going to stop them is to attack them at their head. Without a leader, the skids will not have the intelligence to stop us, and we will be able to separate them and social engineer them into infecting themselves with a virus. Pres is our target. If this mission fails, all is lost, and we have just lost our best man. Why send our best man in? Because, he is the only one who can save us. We need Krysk to release the source in hope that Pres will send the skids after it. However, we all know Krysk is a self-centered, trolling asshole.... An asshole who is the only person Pres hates enough to attack directly.

It's the next day. The skids are gaining ground, but Krysk has agreed to help us flush out the skids, once and for all. He booted up Reliant.jar, and went directly to Pres. They fought once again, and he released the source. Thankfully, the skids went after it; right into our trap. We injected the source with a RAT, and the skids booted Reliant up. They all became under our control, and we were able to destroy Pres. The day is won... for now- AJLAJGLJORUJOGJ!!

In the confusion, the rebels escaped out through the skidproof-tutorial section, but left one man behind: Emotional Patrick's dad. The skids were furious, and made him translate the skidproof-tutorials into code dumps.

With this new-found power, the skids skidded off of every tutorial on the internet. Beginning their advance on the rest of the internet, they decided to make Hackforums their capital. The skids, led by Tsar fromatic, had a working auto-banner and were able to ban all the good coders from Hackforums. Within a minute, Omniscient had unbanned them, but he couldn't realow them access into the Griefing section, which was now completely run by skids. Omni gave up on the Griefing section entirely and used the last Ace up his sleeve to stop the skids: a moderator. Dan. joined the Griefing section as the new moderator, and was horrified. He is not a major force in the anti-skid movement as of now.

All the coders were now horrible trolls, brainwashed by the skids, or trapped outside the Griefing section. Would Krysk help us once again, and hopefully destroy the skids once and for all?

The Transcend - POG feud

Transcend owned POG by hacking their website, POG went all madbro. The end.

The Coder Army's Last Stand

Day 1 - The skids are closing in on us like a boa constrictor. Our resources are limited, and good clients that aren't claimed by the skids are private. We have no hope, and pray for a swift death.

Day 2 - We are not so lucky. Sirenfal sits back and laughs at this section's quality, as we try to hide behind "skidproof" tutorials. Sadly, with the skids having kidnapped Emotional Patrick's dad, they are able to decipher the tutorials and turn them into code dumps. As their numbers grow larger and brave members die on the front lines, we are sure to be doomed to a skid-infested, horrible brainwashing.

Day 3 - We were able to manage to code a LLS into one of the clients, and may be able to take over the skids with our vast knowledge of programming languages. Let's hope that this is true.

So why didn't aVo help us?

Well, earlier this year, the skids attempted to take over the Griefing section once and for all. Sirenfal came to our rescue, only to throw a decoy Reliant saved on a USB out the window to draw the skids off us. Little did he know, that when he got home, his computer was stolen! Reliant would be released for every skid in the world! Of course, Sirenfal couldn't let that happen. We only thought that he had abandoned us. Instead, he had saved us from our worst fate.

Sirenfal trekked through the Appalachian Mountains to get from Florida to where intel had reported the skid went with Reliant. Sirenfal, without his I33t h3x on Reliant, was almost powerless. But, however, he had the element of surprise. Sirenfal burst through the doors, only to find fromatic trying to decompile Reliant in mcp. Sirenfal laughed for an hour straight as fromatic tried to figure out how to fix the errors.. but fromatic called BASS-Code to crack it for him! Sirenfal was stunned to see DrPres burst through the door. Sirenfal scrambled to fromatic's computer, and took back the thumbdrive with Reliant on it. DrPres booted up Prescraft, and Sirenfal booted up Reliant, and they fought each other with their killauras! Sirenfal remembered his mission, however, and didn't risk Reliant being stolen. He used the NC/NC+ bypassed teleport to teleport to the safest place he knew: Shusako's house. He told Shusako, "Hold still!" and proceeded to stuff the thumbdrive up Shusako's asscrack. DrPres found it, and proceeded to freecam into Shusako's ass. DrPres hasn't been found to this day.

The real leader

"NOOOO! GOD DAMN IT, DON'T YOU LEAVE ME NOW!"

He's dead. Damn it, he's dead. Fuck you, iAmDat, fuck you! Why.... WHY! Sergee had tried to stop him, but with iAmDat's aura prioritization in SkidCraft, he didn't stand a chance. There was a gaping hole in his chest, where the heart used to be. McSpams had lagged down the server, but it wasn't enough. He was dead now, and iAmDat was the skid lord.

It had happened one hour earlier, when Sergee, iAmDat and I were sent on a mission to stop Fromatic. We dropped from the shitty wooden shack that was built in the sky, and were to drop in on the faction "xXKewlCidXx"'s base, burn it to the ground, and leave no witnesses. We had our NoFall's on, and landed swiftly. The player was about to complain to the admin, when I yelled to Sergee to turn on the McSpams.

There was a pause, a minute, maybe two long. I heard nothing but static from him, but there was some shit that was happening on iAmDat's mic.

Code "Ok, Ple-"

hears knife stabbing noise

Meanwhile, at the HQ of ButtFuckerIncorporated...

"Ha, 'xXKewlCidXx' don't stand a chance! I swear, ._O, you and me are going to wreck these kids, just watch. They have no fucking idea that I'm just gonna go in like, BAM with my aura and they'll be like, 'ER MAH GAWD HAX0RZ!!!11!'"

"Damn it Booty Hunter, just calm the fuck down. They're right over there!""FUCK YOU iAmDat, FUCK YOU!" Damn it. Too late. He's gone.... but then, who are they? Shit, they must be "xXKewlCidXx" members!"WOOHOO, I'M GONNA FUCKING GET YOU YOU LITTLE KID!" I exclaimed, twirling the sword over my head as I sprinted toward the kid. "YO GON BE SORRY YOU FUCKED WITH US!" Then, ._O decided he just HAD to be better than me, shouting "Yeah, umadgais? You aren't ever gonna get your stuff back again!" Then, shooting a bow right at the fucker's head missing by inches, he drew his sword and ran at the n00by little kid. Hot sweat was clinging to my face now as I ran, and arrows whizzed by me. Well, at least I won't have to worry about shaving. This guy's doing all the work for me, good job or not.

Apocalypse

"Gentlemen, today is a grave day. With the new-found teleport glitch in 1.3, DrPres was able to escape from Shusako's ass. Intel reports that he is amassing the skid army to finally take the source, once and for all. Our mission is to stop them. Enter the next room to begin your briefing."

One month, 23 days, 2 hours later. The skids have been fighting with us fiercely for the Reliant source. Prescraft is killing us all, and even our best clients cannot match the skids ability. They have cracked the very paid clients we use, and have many more people than us. Even our Java drive-by RAT isn't stopping them. The only way we are going to stop them is to attack them at their head. Without a leader, the skids will not have the intelligence to stop us, and we will be able to separate them and social engineer them into infecting themselves with a virus. Pres is our target. If this mission fails, all is lost, and we have just lost our best man. Why send our best man in? Because, he is the only one who can save us. We need Krysk to release the source in hope that Pres will send the skids after it. However, we all know Krysk is a self-centered, trolling asshole.... An asshole who is the only person Pres hates enough to attack directly.

It's the next day. The skids are gaining ground, but Krysk has agreed to help us flush out the skids, once and for all. He booted up Reliant.jar, and went directly to Pres. They fought once again, and he released the source. Thankfully, the skids went after it; right into our trap. We injected the source with a RAT, and the skids booted Reliant up. They all became under our control, and we were able to destroy Pres. The day is won... for now- AJLAJGLJORUJOGJ!!

holy shit, this was actually a really good story, would buy.

seriously, does "plernatious" write ebooks or something?

I'm actually going to make a program like that and try to fool someone with it LMAO. That's so fucking hilarious.

? Death Disturbance ? - September 17, 2016, 4:52 pm

Just saying, this thread is revolutionary and life changing.

ddong - September 17, 2016, 5:29 pm

short story from back in the day: this was when pringles was alive (new fags need not read)

back in the day of pringles beta testing, death disturbance was known as the best hacker around he hacked far and wide on ezpvp and lolpvp. he'd go and dominate every single contestant in the stadium. not a single person could take him out!
then ramisme kicked every1 out of testers then redid the whole thing.

good old days

Av?!?r - September 17, 2016, 7:01 pm

Lmao, I remember when Resilience was the most OP public client around, and for a long time. Back when kids on most servers didn't think you were hacking when you killed them with the Kill Aura, just because there was an option to prevent hitting players that were behind you.

They were like, "OMG YOU LEGEND TEACH ME YOUR WAYS!!!11!1!" LOL. It was fucking hilarious.

SIM-2212192 - September 18, 2016, 11:47 pm

One time I released an autoclicker and it got detected then I shit myself

Dun worry m8 i mak 1 that works u can hav if want!!!

MrRopain - September 18, 2016, 11:56 pm

Legend has it, there was a time when people would perform keyboard checks in Guilngame.

verydank - September 19, 2016, 10:51 am

This is a story about diggehminer

I found him on the Fridge, a server bajancanadian owned back in the days.
we used to skype all day and talk he was my best friend and the best person i had ever met because of minecraft
we went from playing hungergames to survival games to factions to soup after the 1.6 he quit this game and suddenly left me for about a year.
2016 he suddenly msg'd me on skype and we had a talk, he dissapeared again...
never heard from him again.

? Death Disturbance ? - September 19, 2016, 11:25 am

One time I coded a client called FagCraft. Everyone thought it was the best thing ever.

Plot twist.

I coded it in .psd

Ygore - September 19, 2016, 12:05 pm

So me and a friend were hacking on some random HCF server we phased etc, they froze us and pulled us into TS so what we did was that we sent that a link to a booter that sends a stress test to yourself. (We bought a prnts.cr) domain that redirected the shit and we just kept on doing it to people on random servers saying shit like "we don't have hacks look: (link) and then like 15 seconds later they go offline for 1 min, it was hilarious. We kept on going on different servers and ended up

making all staff go offline and then we just fucked with people and made em' raidable. Probably the best story I have ;(

Fuck man, you got me there. It was a prank inside of a prank ?

Mr.Dark - September 28, 2016, 5:10 pm

A while back, I hacked a server run by a few people in their mid 20's by bruteforcing the server's ssh password. Once I was in, I wiped the server clean and uploaded a server jar with a whitelist message that read "memes 2 dank 4 u m8".
