Thread: [Decryption Challenge 1!](#)

LocksmithArmy - November 13, 2014, 1:15 pm

I have been working on a software to encrypt small files (16MB or smaller) and well... Im done.

But how will I know if its any good?

I have encrypted 4 files (which I can decrypt with my tool). I was hoping one of you awesome encryption gurus could take this .zip file:

Code Sorry, I could not post links until I post 50 times(thats alot dont ya think). I guess just pm/email me if you want the link to the challenge files.and try to decrypt the files it contains. and let me know if you succeed and how long it took and what tools you used... stuff like that...

If anyone is up for this challenge please post your findings here or PM me... or whatever you like.

Each file uses the same encryption but different keys and is a different file type.

Thank you all, I look forward to your criticisms.

I will provide the tool I made to encrypt the files with so you have something to reverse engineer with.

encrypt your own files, then try to break them knowing the original file... once you have that down, take a crack at my challenge files.

Didn't know it required 50 posts.

you do realize you posted a link to the same thread you are in right...

and since 983>50 you would be allowed to post links...

(wow cant even post links in a quote lol)
